PREFACE.

The following report on the health of the City has been compiled along the lines laid down in the Memorandum of the Ministry of Health.

The chief vital statistics for the year 1927 were:—

Estimated population	• • •	293,200
Birth rate		14.73 per 1,000 of population
Death rate		14:57 per 1,000 ,, ,,
Zymotic death rate		0·52 per 1,000 ., ,,
Tuberculosis death rate	•••	1.00 per 1,000 ,, ,,
Infantile mortality rate		92 per 1,000 births

As compared with 1926 these figures show a fall of 1.58 per 1,000 in the birth rate and an increase of 0.99 in the death rate. There was an increase of 0.05 in the zymotic death rate, the tuberculosis death rate showed a slight decrease, while the infantile mortality rate remained the same.

JOHN J. BUCHAN,

Medical Officer of Health.

TOWN HALL, BRADFORD, 31st July, 1928.

I.—VITAL STATISTICS.

Area and Population. The City of Bradford has an area of 22,880 cres, and the population as adjusted by the Registrar General for the iddle of 1927 is 293,200.

DISTRIBUTION AND DENSITY OF POPULATION.

City	•••	•••	•••	293200	22880	12'8

The average density of population varies from 2.6 persons per acre Tong Ward to 56.3 in the West Ward.

Births. The number of births registered in the 52 weeks ending 31st December, 1927, was 4,318, of which 2,172 were males and 2,146 females. This gives a birth-rate for the year of 14.73 per 1,000, a decrease of 1.58 per 1,000 from last year.

Average Quinquennial Birth-rates from 1871.

1871-75	 39.0	1896-1900)	25.1	1921-25		17.9
1876-80	 35.6	1901-05		22.6	1926		16.3
1881-85	 31.1	1906-10		20.1	1927	•	14.7
1886-90	 29.8	1911-15		19.0			
1891-95	 27.5	1916-20		15.4			

Illegitimacy. Of the 4,318 births registered, 255, or 5.9 per cent, were illegitimate. This rate is 0.4 per cent. higher than in 1926.

Deaths. The total deaths occurring in Bradford in 1927 was 4,218; after making additions and deductions of persons dying away from their place of residence the number becomes 4,271. The corrected death-rate is therefore 14.57 per 1,000, or 0.99 per 1,000 higher than in 1926.

Average Quinquennial Death-rates from 1871.

1871-75		25.9	1896-1900)	17.9	1921-25	 14.1
1876-80		22.3	1901-05		16.3	1926	 13.6
1881-85	•••	19.9	1906-10		15.1	1927	 14.6
1886-90		20.9	1911-15		15.5		
1891-95		19.7	1916-20		16.0		

The death-rate among the male population in 1926 was 16.07 and among the female population 13.45 per 1,000.

The birth and death-rates in the various wards of the city are seout in the table on page 7.

7

Mortality at Different Ages. The following Table shows the total deaths in each age group during the past six years.

NUMBER OF DEATHS IN EACH YEAR AT DIFFERENT AGE PERIODS.

Age	1922	1923	1924	1925	1926	1927
Under 1 year	456	412	462	461	435	404
1- 2 years	102	138	121	138	81	111
2- 5 ,,	81	85	97	104	66	106
5—15 ,,	95	90	70	95	72	99
15—25 ,,	160	144	144	123	123	119
25—45 ,,	485	484	464	444	435	473
45 - 65 ,,	1154	1144	1303	1233	1142	1255
over 65 ,,	1551	1501	1734	1457	1567	1704

The infantile mortality rate for 1927 was 92 per 1,000 births, the same as that for 1926. The mortality between one and sixty-five years was 8.0 per 1,000, and over sixty-five years 99.2 per 1,000.

From the above table it will be seen that there was an increase in the number of deaths at all age periods except under one year and between fifteen and twenty-five years.

Public Institutions. The accommodation in all kinds of institution available for Bradford amounts to more than 3,500 beds or 1.2 per cent of the population or about 1 in 80.

Voluntary Hospitals, 1927.

Hospital	Number of beds	Character of cases,	Cases admitted to Hospital	Cases treated in outdoor depart- ments
Bradford Royal Infirmary Bradford Children's Hospital Royal Eye and Ear Hospital	210 74 72	General Children Eye & Ear	3615 1381 3342	14834* 2924 12257
Totals	356		8338	30015

^{*} Exclusive of dental cases.

At the out-patient department of the Bradford Royal Infirmary ,656 persons were treated as out-patients, and 6,178 as casuality cases, nd 376 as dental cases. The number of attendances made by out-atients was 43,332, and by casualty cases 33,752. At the orthopædic epartment 40,189 treatments were given.

The total number of patients admitted to municipal hospitals in \$927 was 8,530. The nature of the cases is given elsewhere in this report idealing with each hospital. On the 31st December, 1927, there were \$4 patients maintained in institutions for the mentally defective.

At the end of the year the number of persons in receipt of relief the Bradford Union was: Institutional, 1,339, and Domiciliary 4,839, qual to 26.6 per 1,000 of the population; the corresponding figures for forth Bierley Union, a part of which is in the city, were: Institutional 79, and Domiciliary 2,377, equal to 21.2 per 1,000 of population.

Proportion per 1,000 of Population in Receipt of Relief.

		Indoor	Outdoor	Total Chargeable
England and Wales		5.8	25.8	31.6
Bradford Union	• • •	5.8	20.8	26.6
North Bierley Union		3.2	17.7	21.2

The number of deaths in public institutions is given in the tables n pages 10 and 11.

DEATHS IN PUBLIC INSTITUTIONS.

Name of Institution	1925	1926	1927

Other Institutions	 15	5	10
			`
Total	 1352	1447	1502

It will be noted that in 1927, 129 deaths, or 3.0 per cent. of the total deaths, occurred in Poor Law Hospitals; 92 deaths, or 2.2 per cent., in Lunatic Asylums; 299 deaths, or 7.0 per cent., in Voluntary Hospitals; and 972 deaths, or 22.8 per cent., in Municipal Hospitals.

The percentage of the total deaths in the city occurring in public institutions in 1927 was 35.2.

The age incidence of deaths in Public Institutions is shown in the bllowing Table:—

	Poor Law Hospitals	Lunatic Asylums	Voluntary Hospitals	Municipal Hospitals	Other Institutions	Total	Per cent. of Deaths at each age.
Under 1			62	7 6	1	139	34.4

^{*} Civil population.

II.—SANITARY CIRCUMSTANCES OF BRADFORD.

(A) Water. The water supply of Bradford, as provided by the Corporation Waterworks, is obtained from several upland surface sources and is distributed throughout the city by gravitation. The supply is constant and the water is generally soft. At the end of the year there were 75 farms and 276 houses in isolated localities in the city not connected with the Corporation mains. Seven years ago there were 90 farms and 390 houses in the city not so connected. Of the several sources of supply, only one exhibits in its natural state any plumbo-solvency. This is the supply from Thornton Moor, 1,241 feet above sea level, where water is collected from peaty uplands to the west of the city. This water is treated at the reservoir to reduce the degree of plumbo-solvency. Constant observations are taken of this water as distributed in the city, and the following Table gives the average results of analyses of 184 samples taken in 1927.

Average Results of Analyses of Water as distributed.

	Grains per Gallon				
	Lead	Lead taken up in 24 hours	Alkalinity	Hardness	
92 samples before 8 a.m	0.0079	0.0553	1.238	3.354	
92 samples after 1 p.m	0.0006	0.0236		_	

The number of notices served to secure a proper water supply (Sec. 53 Bradford Corporation Act, 1925) was 28, affecting 116 houses. Most of the complaints arose from defects in the service pipes.

(B) Drainage and Sewerage. There are 181 farms and 994 houses not connected with the Corporation sewers. Three houses have been connected during the year, and one cesspool has been abolished.

(C) Closet Accommodation and Scavenging. During the year 999 new water closets were provided. These included 143 additional water closets for dwelling-houses. Twenty-seven water closets were substituted for waste water closets (tipper), and 664 were substituted for privies, the ashpits in connection with them being replaced by dust bins. One hundred and one water closets were provided for factories and workshops, and 64 for other premises.

The number of times each ashpit was emptied by the Cleansing Department during the year was on the average 9. The dust bins are emptied each week.

During the period under review, 298 personal applications were made to the Sanitary Office for the cleansing of ashpits, as against 560 he previous year. Three hundred and sixty applications were received through the post, as against 472, and 920 were made by the Sanitary Inspectors, as against 1,568 the previous year, the total being 1,578, as against 2,600 for the previous year.

PLANS PASSED BY THE HEALTH COMMITTEE, 1927.

Three hundred and sixty-one plans have been approved by the Health Committee for the construction of the following works:—

- 608 water closets affecting 822 dwelling-houses.
 - 12 water closets affecting 7 licensed premises.
 - 4 urinals affecting 4 licensed premises.
- 103 water closets affecting 64 factories and workshops.
- 52 water closets affecting 15 schools, clubs, and other premises.
 - 4 urinals affecting 4 schools, clubs, and other premises.
- (D) Sanitary Inspection of District. The number of tests to drains and sanitary fittings made by the Sanitary Inspectors during the year was 2,829, of which 989 were volatile tests with 222 positive results, 1,775 were coloured water tests with 233 positive results, 65 smoke tests with 40 positive results. In 379 of the houses tested infectious disease was present, in 245 cases diphtheria with 20 positive results, in 14 enteric fever with no positive result, and in 120 other diseases with 8 positive results. In 22 cases the system of drainage was such as to render impracticable the application of a test.

The drainage of 15 blocks of property comprising 102 houses and bther premises was dealt with under Section 41 of the Public Health Act, 1875, as against 163 houses the previous year. These defects were found as a result of tests applied to the drains; in one case after the occurrence of a case of infectious disease; in 7 cases after complaints from the tenants of bad smells in the cellars; in 2 cases after complaints of water in the cellars; and in 5 cases from defects found by the District Inspectors during the progress of drainage work. All

these were dealt with by the City Surveyor. One hundred and ninety-six downspouts have been disconnected from drains and sewers, as against 283 last year. Accounts have been received and passed for payment for the disconnection of 95 downspouts at 108 houses, as against 86 downspouts at 109 houses last year. The total cost of the work involved was £160 10s. 10d., or an average of £1 14s. 0d. for each downspout. The total amount payable by the Corporation was £79 14s. 7d.

The District Sanitary Inspectors have made 95,679 inspections and visits for the investigation and suppression of nuisances. The total number of nuisances reported was 9,168. The following statement shows the nature and amount of work performed by the Inspectors during the year, together with the figures for the five preceding years for comparison.

Complaints specially investigated	2029	2202	2240	2001	1900	1020

During the year 1,227 complaints as to nuisances were received, as gainst 1,272 the previous year. The number of statutory notices served ir the abatement of nuisances was 2,467, as against 2,656 last year. he number of preliminary notices served for dangerous places to be ade secure was 15, this being the same as the previous year. There ere 91 of these places dealt with, as against 103 last year. Nineteen ises relating to nuisances in connection with caravans were heard before le City Magistrates. Nine were withdrawn, the vans having been moved prior to the hearing of the cases, 2 were dismissed, and in the maining 8 cases orders were made for the nuisances to be abated ithin 14 days. Thirteen other cases were heard at the City Court for iling to obey notices issued from this Department. Orders were made 2 cases, and, 1 of these not being complied with, the defendant was ummoned, and fined £11 10s. 0d., or an alternative of 31 days' oprisonment. Still ignoring the order, the defendant was again fined a tily penalty, which amounted to £21 10s. 0d. The order was afterards complied with. In another case a fine of £5 was inflicted. The remaining 10 cases were withdrawn, the work having either been completed before the hearing of the case or during the time of the adjournment. The total amount of fines and costs inflicted was £40 16s. 0d.

The number of visits made to burial grounds within the city was 121, as against 51 last year. No irregularities were observed. As a result of road improvements which affect Greenhill Chapel Burial Ground it has been necessary to remove a large number of bodies from the graveyard here to Bowling Cemetery. Up to the end of the year 779 bodies were removed and re-interred under the supervision of this Department, following a licence issued by the Home Office. Three other licences were also issued, affecting 2 re-interments at Scholemoor Cemetery and 1 at North Bierley Cemetery.

During the year the woman sanitary inspector has made 216 inspections of the conveniences for women at the public parks and recreation grounds, with the result that in 10 instances nuisances were found which rendered it necessary to notify the person in charge. In every case the nuisance was abated at the verbal request of the inspector.

(2) SHOPS ACTS, 1912—1921.

Shops Inspected. The total number of shops on the register is 7,580, as compared with 7,463 last year. The number of visits and investigations made to shops where young persons were employed was 730. In 121 shops the employers had failed to exhibit the notice referring to the specific provisions of the Act, and the employers were cautioned. Visits were made to 1,187 shops where female assistants were employed, and in all cases it was found that seats were provided for the assistants in accordance with the Act. In 41 shops no notice

pecifying the day of weekly half-holiday was displayed. In 59 instances shops were found open and the occupiers selling non-exempted articles on the weekly half-holiday, and 22 persons were found hawking on the lay fixed for the closing of shops. Proceedings were taken against 16 shopkeepers and 3 hawkers, and the remaining offenders were cautioned. The occupiers of 118 shops were found not displaying the notices specifying the exempted trades for which they were remaining open have the closing hour on the weekly half-holiday. They were all autioned. In 238 cases employers failed to provide the prescribed form relating to their assistants' weekly half-holiday, and they were all cautioned. Thirteen assistants were found employed after 1.30 p.m. on the specified day of their weekly half-holiday. In 2 instances the employers were prosecuted, and the remainder were cautioned. In 14 nstances it was found that assistants were not having intervals for meals as prescribed by the Act, and the employers were all warned.

Closing Orders. During night visits and observations after the closing hours affecting certain classes of shops, 11 shops were found ppen in contravention of the Orders, and 5 persons were found hawking after the closing hour fixed for shops. One shopkeeper and 2 hawkers were prosecuted, and the remaining offenders cautioned.

Shops (Early Closing) Acts, 1920-21. As a result of night inspection made by the Shops Inspectors, not only on weekdays but also on Sundays and holidays, 28 shops were found open after the closing hour under the above Acts, and 5 persons were found hawking in the streets after the closing hour for shops. Five shopkeepers were prosecuted, and the remaining offenders were cautioned.

PROSECUTIONS.

The following is a summary of the prosecutions taken under:-

Nature of Offence.	No. of Caser.	Penalties.	Costs.
Shops Act, 1912—1921.	•	£ s. d.	£ s. d.
Failing to observe Weekly Half- holiday Orders	19	18 15 0	4 0
Breach of Closing Order	3	1 15 0	
Breach of Shops (Early Closing) Acts, 1920-21	5	4 5 0	
Failing to allow Shop Assistants prescribed Weekly Halfholiday	2	1 10 0	
Factory and Workshop Act, 1901 Failing to send in list of Outworkers	4	6 0 0	16 0
Rag Flock Act, 1911. Flock used for making bedding not conforming to prescribed standard of cleanliness	1	1 0 0	1 1 0
Totals	34	33 5 0	· 2 1 0

(3) RAG FLOCK ACT, 1911.

During the year 25 samples of rag flock were submitted to the City Analyst. With one exception these were found to conform to the standard of cleanliness laid down in the Regulations under the Act. In the remaining instance the user of the flock was prosecuted.

(F) Premises, Etc., Controlled by Bye-laws or Regulations.

(1) COMMON LODGING HOUSES.

At the end of the year there were 18 registered Common Lodging Iouses in the city, comprising 110 sleeping-rooms, affording accommodation for 861 males, 22 females, and 24 couples, this being the same as 1st year. Three applications for transfer of the registry as keepers are granted.

The total number of persons accommodated during the year was 44,296, as against 244,012 the previous year, this being an increase of 84. The nightly average was 669, representing 71.8% of the accomnodation available. This shows an increase of 0.1% on the previous ear.

The following table shows the number of nights spent by single nen, women, young persons, and couples in Common Lodging Houses during the year:—

ADULTS			8 to 21	years	Under 8 years		
Males	Females	Couples	Males	Females	Males	Females	
221565	6664	7521	153	5	416	451	

The whole of the houses have been limewashed and cleansed in accordance with the requirements of the Public Health Act, 1875.

The total number of inspections made during the year was 956. Of these, 8 were made during the night, but no case of overcrowding or llegal occupation of day-rooms was found to exist. No difficulties have been experienced in gaining admittance at any time, and it has not been necessary to resort to Police Court proceedings.

There were two cases of small-pox reported from one Common odging House during the last month of the year.

(2) CANAL BOATS.

The number of boats inspected within the city boundary was 72.

Three of these contained cabins which were not maintained weatherproof and dry; the structural condition of the remaining 69 boats was
satisfactory. In one case there was no certificate of registry on board.

One boat had the registration number defaced. One boat was not
furnished with an appropriate water cask of sufficient capacity.

Ten notices were served with respect to the above breaches of the Acts and Regulations. In 6 cases the cause of complaint was remedied; in one case the work was carried out, but the boat was sunk before inspection; in the remaining 3 cases the notices had not been complied with at the end of the year. The two notices outstanding at the end of 1926 were complied with during the year.

(3) OFFENSIVE TRADES, Etc.

The number of offensive trades within the city is 333, of which 280 are fish friers, these being the same numbers as last year. Two hundred and six of the fish friers and 3 other offensive trades are subject to annual licence.

The number of visits of inspection made to fish friers was 1,021, and to other offensive trades 186.

There was one prosecution for breaches of the Offensive Trade Bye-laws, instituted against a fish frier for failing to keep his premises and using utensils clean. The offender gave an undertaking to the Court that he would discontinue the business. This the Court accepted, and ordered the defendant to pay the costs.

(4) SCHOOLS.

The number of visits made for the sanitary inspection of schools was 750, as against 637 last year. Minor defects have been noted and remedied at various schools.

(5) INSPECTION OF CINEMAS AND OTHER PLACES OF PUBLIC ENTERTAINMENT.

The periodical inspection of these places was carried out by the District Sanitary Inspectors, and 180 recorded inspections have been made during the year.

Generally, these places have been kept in a satisfactory condition so far as their sanitary arrangements are concerned. In one or two instances minor defects which were observed on inspection were remedied on the attention of the management being drawn thereto.

(G.) Other Sanitary Work.

(1) SMOKE INSPECTION.

One thousand two hundred and forty-nine observations of chimneys tere made during the year. Two hundred and twenty-four were found be discharging undue emissions of smoke. In connection with these ases 706 furnaces were examined and 41 managers or owners, 85 ngineers, and 113 stokers were interviewed by the Smoke Inspector.

Eighteen cases of smoke offence were reported to the Health Comnittee by the Smoke Inspector, and prosecutions were instituted in 17 f these cases. Following a conference between the Health Committee and one offending firm, no legal proceedings were taken with respect to the offence for which they had been reported.

Many chimneys in Bradford are receiving the gases from a large number of furnaces, varying up to 34 in one chimney. When smoke is discharged it is not only necessary to ascertain which furnaces are creating the smoke, the original and possible secondary causes, but it is also necessary to solve the further complication of apportioning the responsibility between the owner, engineer, and half-a-dozen or more stokers. These complications often give rise to much trouble in locating the source of the offence.

Monthly tests of the amount of solid atmospheric impurities deposited in one industrial district of the city have been carried out for the third year in succession, with results as follows for the year under review:—

Total solid deposit for the year in the same industrial district.

Month.			w in	eight of Deposit tons per sq. mile.
January		 		139.81
February		 		160.44
March	• • •	 		129.58

(A) MILK SUPPLY.

The Veterinary Inspector (Mr. W. Halstead, M.R.C.V.S.) reports hat there is an average dairy cow population of 3,238 dairy cows in the ty, housed in 258 dairy farms. The amount of milk produced by these pws is estimated at 7,500 gallons per day, whilst about 7,000 gallons ome into the city by train or road; the total quantity of milk consumed the city being about 14,500 gallons daily, representing a daily llowance of 0.4 pints per head of the population for all purposes. It ould appear that the quantity of raw milk consumed could, with dvantage, be considerably increased, more especially by the young opulation below 15 years of age.

The city dairy herds were regularly inspected during the year, Mr. Halstead paying 676 visits to dairy farms. At these inspections 16 cases

of Tuberculosis were noted, rendering untreated milk dangerous to consumers. Of these 16 cows, 5 were affected with Tuberculosis of the Udder, and were members of 5 herds, whose total daily milk production is estimated at 134 gallons per day; the remaining 11 cows were affected with Tuberculosis (other forms).

The number of samples of milk taken by the Veterinary Inspector for bacteriological examination during the year was 200, of which 66 were for biological tests.

Tuberculosis Order, 1925. Of the above-mentioned 16 cows, 15 were slaughtered under the provisions of this Order; on post-mortem examination one showed the disease as not advanced, whilst in the remaining 14 cows the lesions were those of advanced Tuberculosis. The amount of compensation paid to the owners was £39 5s. 0d., and the nett salvage received for the disposal of the carcases, etc., was £22 13s. 0d. The other cow affected with Tuberculosis of the Udder was slaughtered at the Public Abattoir by the owner. This animal showed the disease as advanced.

Milk and Dairies (Consolidation) Act, 1915. Nine premises situated outside the city were visited with the Veterinary Inspectors of the respective Authorities in whose area the farms were located, when 171 dairy cows were examined. On one of these premises the source of the contamination with B. Tuberculosis could not be traced; from the other eight farms 8 cows suffering from Tuberculosis of the Udder were slaughtered.

The Milk (Special Designations) Order, 1923. There is one herd in the city producing under this Order 38 gallons of Grade "A" Tuberculin Tested milk per day, and three herds producing 156 gallons of Grade "A" milk per day. The demand for this "designated" milk seems to be increasing, and the public are beginning to appreciate the advantages at a very small additional cost of such a milk.

The milk produced generally under this Order has a higher standard of cleanliness than is required by the provisions of the Order. Amendments to the Order to raise the standard of cleanliness appear to be necessary, more especially as the standard of cleanliness of the ordinary commercial milk is influenced by the standard of the designated milks.

Cowsheds. Eight hundred and fifty-six inspections of cowsheds re made, and 326 inspections of dairies and utensils.

The number of defects found to exist was 130, and of these 87 were nedied, in addition to 13 which were outstanding at the end of the vious year.

Milk Shops, Dairies and Purveyors of Milk. There were at the end of the year 330 vendors of milk registered and residing within the city. These may be classified as follows:—

Cowkeepers and retailers	 137
Retailers only (in the streets or from their homes)	 164
Milkshops (including dairies, confectioners, small	
grocers, and other shops)	 29

In addition to these milk shops there were 350 shops where milk is sold in sealed bottles only.

The numbers of visits made to these premises was 500, and generally the premises were found in a satisfactory state.

In addition to these 330 vendors residing within the city, 68 dairymen came into the city from surrounding districts to sell milk by retail.

The milk supply produced within the city is supplemented from 231 sources outside the boundary. From these sources the milk arrives in Bradford in 128 cases by rail, in 3 by tramways, and in 100 by road. The total amount of milk produced outside the city boundary and consumed within the city is estimated to be about 7,000 gallons per day.

During the year 30 milk purveyors were registered, in addition to 14 shopkeepers who were registered to sell milk in sealed bottles only.

Chemical Examination of Milk. Five hundred and eleven samples of milk were analysed, and the results are shown in tabulated form on he following page. In addition, two separated milks were analysed and found to be genuine. These analyses show that 3.71% of the samples are an analysis under 3.0% of fat, and 77.29% over 3.5% of fat; whilst .95% of these samples gave an analysis under 8.5% of non-fatty solids. The total number either below 3.0% of fat or 8.5% of non-fatty solids as 29, or 5.67% of the samples.

Bacteriological Examination of Milk. The 286 samples examined or Tuberculosis were taken from 215 sources of supply, in 153 of these ases the sources of supply were outside the city boundary and in 62 aside. The 14 positive results in these cases affected 14 sources of upply.

The 275 samples of milk submitted for bacterial counts were btained from 207 sources of supply; in 149 cases the supply was from utside the city boundary, and in 58 cases inside. In 54 samples, or 9.64%, B. Coli was absent in 1c.c.; in 72 samples, or 26·18%, B. Coli ras absent in 0·1 c.c.; in 71 samples, or 25·82%, B. Coli was absent in 0·1 c.c.; in 33 samples, or 12%, B. Coli was absent in 0·001 c.c.; and 145 samples, or 16·36%, B. Coli was absent in 0·0001 c.c.

Milk and Cream Regulations, 1912 and 1917. The number of amples of milk examined for preservatives was 513, and they were all bund to be free from preservatives. Seven samples of cream were camined for preservatives, and 1 was found to contain preservatives; is was an informal sample obtained at a small dairy. A formal sample as afterwards purchased, which was labelled in accordance with the egulations. In 16 instances samples of preserved cream were submitted verify or otherwise the accuracy of the statements given on the labels, and in all cases it was found to be correct. In all these samples of eserved cream the fat percentage was above 35. The following table ves the particulars of analysis of the samples.

Analysis of Preserved Cream.

Municipal Milk Depot. At the Municipal Milk Depot in 1927 57,748 gallons of milk were obtained from 5 sources, including 14,063 gallons of Grade "A" Tuberculin Tested milk. The amount of milk sold was 55,975 gallons, and the amount of butter and cheese made 169 lbs. Butter and cheese was only made when the milk could not be disposed of as such.

The institutions supplied with the milk were as follows:—Hospitals and other Institutions under the Health

Committee			 14,926 gallons
Maternity and Child Welfare Scheme	· · · ·	•••	 22,482 gallons
Other Institutions and Persons			 15,657 gallons

Total 55,975 gallons

(B) SLAUGHTERHOUSES AND MEAT INSPECTION.

The number of private slaughterhouses within the city is 35, and 1 knacker's yard. Thirteen of these, and also the knacker's yard, are subject to annual license, and 22 are registered slaughterhouses. The number of visits made to private slaughterhouses was 1,795, and to butchers' shops and potted meat and sausage-makers' premises 3,187. There were no seizures of diseased or unsound meat during the year.

The number of carcases condemned wholly or partly was 2,075. These were as follows:—

CARCASES CONDEMNED WHOLLY OR PARTLY AND DESTROYED.

				Wholly	Partly	Total
Cows				135	571	706
Heifers	•••		•••	10	87	97
Bullocks				5	69	74
Sheep	•••			172	79	251
Pigs	•••			300	549	849
Calves	•••		•••	78	20	98
	Totals	•••		700	1375	2075

The total weight of meat in lbs. found unsound or unwholesome as as follows:—Beef, 80,294; Mutton, 11,352; Pork, 49,576; Veal, 406; Offals, 27,208; a total of 172,836 lbs. or upwards of 77 tons. In addition to the above figures are the following unclassified food-tuffs which were dealt with as being unwholesome and destroyed:—Frozen Beef, 1,083 lbs.; Ox Tongues, 52 lbs.; Offals, 936 lbs.; and Ox Skirts, 20 lbs.

The total number of animals slaughtered at the Public Abattoirs ras as follows:—

				St. James's	Bolton Lane	Total
Beasts	• • •	•••		17,140	425	17,565
Sheep		•••	•••	45,174	1,435	46,609
Lambs		•••	• • •	5,049	471	5 520
Calves	•••		• • •	5,853	46	5,899
Pigs	•••		•••	17,563	1,452	19,015
	Totals		•••	90,779	3,829	94,608

Of these animals 641 beasts and 397 pigs were found tuberculous, ie extent and incidence of which is shown in the following table:—

		Ве	easts	Pigs			
		No.	Per- centage	No	Per- centage		
Wholly destroyed	•••	107	0.64	123	0.64		
Partially destroyed		81	0.43	142	0.74

Totals	•••	641	3.81	397	2:07		

The particulars as to the total number of animals slaughtered have been obtained from the Office of the Markets Superintendent.

(C) OTHER ARTICLES OF FOOD.

The total weight in lbs. of other articles found unsound or unwhole-some during the year was as follows:—Rabbits, 5,040; Game and Poultry, 504; Vegetables, 125,557; Fruit, 38,530; Wet Fish, 5,040; Dry Fish, 2,742; Shell Fish, 20,160; a total of 197,073 lbs., or about 88 tons. All these articles were surrendered and destroyed.

Daily inspections of fish and various food-stuffs were made at the City Markets. Three hundred and sixty-six applications were made to the Inspector for the examination of food-stuffs, and in each case the goods were found unfit for human consumption and were surrendered to the Inspector and destroyed. Ten hundred and ninety-one visits were made to retail fish, game and poultry dealers' premises. Two hundred and sixty-one visits were made to fish-curing premises, which were all found clean and satisfactory.

Ice Cream Makers' Premises. Fourteen hundred and sixty-one visits were made to ice cream makers' premises. Seventy-two persons applied for registration of premises for the manufacture of ice cream. At the close of the year there were 509 manufacturers of ice cream in the city. Proceedings were instituted against two persons for breaches of the Ice Cream Regulations, and fines of £2 and 10/- respectively were inflicted.

Shell-fish, Watercress, and Lettuce. One hundred and eighty-fou samples were obtained, consisting of mussels, 133; cockles, 14; oysters 6; watercress, 18; and lettuce, 13. All these samples were submitted to the City Bacteriologist, with the following results:—

(D) SALE OF FOOD AND DRUGS ACTS,

The number of samples of food and drugs taken under these Acts and submitted to the Public Analyst for analysis by the Food and Drugs Inspector was 895. Of these 858 were certified as genuine, and 37 as adulterated or doubtful. In 5 milk adulteration cases proceedings were taken against the vendor, and a conviction was obtained in each case. The total penalties and costs amounted to £3 3s. 0d. Proceedings were taken against the vendor of a sample of paregoric, which on analysis was found to contain no tincture of opium. A conviction was obtained, and a fine of £1 and costs was imposed; the adulterations in the remaining cases was small, and the vendors were cautioned by letters. The nature of the articles sampled was as follows:—Butter. 33; lard, 31; margarine, 31; condensed milk, 9; cheese, 2; coffee, 9; cocoa, 4; tea, 2; jam, 13; marmalade, 3; pineapple (tinned), 3; golden syrup, 3; cornflower, 9; custard powder, 2; honey, 4; baking powder, 10; mustard, 7; potted fish-paste, 2; pickles, 4; self-raising flour, 3; rice, 7; potted meat, 6; sausages, 10; rusks, 2; sweets, 14; preserved cream, 16; sugar, 3; dried fruit, 7; candied peel, 3; tinned fruit, 4; flour, 2; malt vinegar, 4; cream, 7; pepper, 9; and other articles, 26. Milk samples, 513; drugs, 78; of which 26 and 11 respectively were reported against.

IV.—PREVALENCE AND CONTROL OF DISEASE.

(A) INFECTIOUS DISEASES.

The total deaths in Bradford from enteric fever, smallpox, measles, arlet fever, whooping cough, diphtheria, and diarrhæa and enteritis nder 2 years, known for convenience as Zymotic diseases, in 1927 was 51, giving a mortality rate for this group of 0.51 per 1,000.

Average Quinquennial Zymotic Death-rates from 1876.

1876-80	• • •	3.1	1896-1900	2.0	1916-20	•••	0.42
1881-85		2.1	1901-05	1.7	1921-25		0.49
1886-90		2.3	1906-10	1.3	1926		0.47
1891-95		$2\cdot3$	1911.15	1.2	1927		0.51

The Zymotic death-rate for the first quarter was 0.87; for the cond 0.61; for the third 0.30; and for the fourth 0.27.

The diseases to be notified in Bradford are smallpox, chicken x, cholera, plague, diphtheria, membranous croup, erysipelas, scarlet ver, measles and German measles, whooping cough, ophthalmia onatorum, infective enteritis, acute poliomyelitis, cerebro-spinal fever, perculosis, acute polio-encephalitis, encephalitis lethargica, pneumonia d influenzal pneumonia, malaria, dysentery, and the fevers known by y of the following names, typhus, typhoid, enteric, relapsing, conued or puerperal, and in certain circumstances venereal disease.

Diphtheria. Cases, 340; Deaths, 34; Fatality, per cent., 10.0.

MORTALITY RATE PER 1,000 IN PREVIOUS YEARS.

	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Bradford England	0.16	0.10	0.10	0.09	0.04	0.06	0.03	0.06	0.06	0.12
and Wales	0.14	0.13	0.15	0.12	0.11	0.07	0.06	0.07	0-07	0.07

The number of cases of Diphtheria in 1927 was rather more than that for 1926, and the fatality rate was higher. The sickness rate per 1,000 was 1·16. The cases were fairly evenly distributed throughout the city, the greatest number occurring in the East Bowling Ward, where 41 cases were notified, and in the Bradford Moor and Little Horton Wards, where 37 and 35 cases occurred respectively.

CASES OF DIPHTHERIA MONTH BY MONTH.

		Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	D ec
	Jumber of Cases	40	41	34	31	32	33	18	99	29	31	1.4	15
N	Tumber of Cases	40	41	34	31	32	33	18	22	29	9	9 31	9 31 14

The greatest incidence of the disease fell on children between 2 and 6 years of age, and the highest death-rate between 4 and 5 years and under 1.

Cases and Deaths According to Age.

	Under 1 year	1-2	2—3	3 - 4	4-5	5-6	6 - 7	7—8	8—9	.9—10	10-15	15-20	Over 20	Total

Fatality per cent.	36.4	6.2	11·1	13.6	35.7	18-4	22.2		6.2		2.9	-	-	10.3

The number of cases removed to hospital was 299, or 87.9 per cent of the cases.

Supplies of diphtheria anti-toxin for the use of practitioners in the city are kept at the Fever Hospital and at the Health Department. All patients admitted to the City Fever Hospital suffering from diphtheria receive a therapeutic dose of anti-toxin. The Schick test is not employed in the city.

Enteric Fever. Cases notified, 17; Death, 1; Fatality per cent. 5.9.

MORTALITY RATES PER 1,000 IN PREVIOUS YEARS.

	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Bradford England	0.01	0.03	0.02	0.01	0.01	0.02	0.01	0.01	0.01	0.01
and Wales	0.03	0.01	0.01	0.02	0.01	0.01	0.01	0.01	0.01	0.01

The monthly incidence of the disease is shown as follows:— CASES OF ENTERIC FEVER MONTH BY MONTH.

	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Number of Cases			1	1			9	1	1	4	_	_

The sickness rate in Bradford was 0.06 per 1,000 of the population.

The number of cases removed to hospital was 14.

Scarlet Fever. Cases, 527; Deaths, 1; Fatality per cent., 0.2.

MORTALITY RATE PER 1,000 IN PREVIOUS YEARS.

	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Bradford England		0.02	0.04	0.04	0.09	0.02	0.01	0.02	_	0.01
and Wales	0.03	0.03	0.04	0.03	0.04	0.03	0.02	0.03	0.02	0.01

The number of cases of Scarlet Fever notified in 1927 is less than nat of 1926. The sickness rate per 1,000 in Bradford in 1927 was 80. The greatest number of cases occurred in the Bradford Moor Vard, where 95 cases were notified, and in the Tong, Great Horton and Manningham Wards, where 49, 40 and 37 cases occurred espectively.

Cases of Scarlet Fever Month by Month.

	Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Number of Cases	40	19	29	30	30	25	29	24	75	81	73	72

The cases and deaths classified according to age are seen in the following Table:—

CASES AND DEATHS ACCORDING TO AGE.

	Under 1 year	1-5		15-25 years				Total
Cases	7	97	343	45	32	3		527
Deaths	—	1		1-1	- 0		_	1
Fatality per cent.	1 · 1				-			0.2

The number of cases removed to hospital was 452, or 85.8 per cent. of the cases. The Dick test is not employed in the City.

Small-pox. Fifty-one cases of Small-pox, all of which recovered, occurred in the city in 1927.

Of these, 29 were infected outside the city, 15 occurred in connection with a sale of work held in the Wyke district, and in the remaining 7 cases no source of infection was ascertained. The disease was, in most cases, of the present mild type, although 3 of the cases were semi-confluent in character and exhibited a brisk secondary fever.

Only 10 of the cases had been successfully vaccinated, the period between vaccination and the attack of Small-pox being 62, 53, 14, 53, 66, 14, 58, 61, 25, and 59 years respectively.

All contacts were kept under daily observation by the staff for 19 days from the last date of contact. Although every precaution was taken to prevent the spread of the condition the efforts of the Health Department were hampered by the refusal of the majority of contacts to submit to vaccination.

The following Table gives the vaccination returns in the Bradford Union since 1915. The figures have been supplied by Mr. Rogers, the Superintendent Vaccination Officer of the Bradford Union.

Bradford	1.41	1.10	0.88	0.92	0.77	0.80	0.88	0.81	0.84	0.80
England and Wales	1.32	0.98	0.87	0.88	0.89	0.80	0.80	0.83	0.77	0.79

The fall in the death-rate from pulmonary tuberculosis is maintained.

Considering the deaths in relation to sex the death-rate from almonary tuberculosis was in 1927 among males, 1·11 per 1,000, and nong females 0·53 per 1,000. Of the deaths occurring in 1927, 7 per nt. were not notified.

The notifications received numbered 436, of which 379 were notified r the first time. This is an increase in primary notifications over the evious year.

(B) Other Forms of Tuberculosis. Deaths, 59; Mortality rate per 100, 0.20.

RECORD OF PREVIOUS YEARS.

	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927

Bradford -	0.31	0.22	0.19	0.24	0.25	0.22	0.17	0.17	0.17	0.20
and Wales	0.37	0.28	0.26	0.25	0.23	0.23	0.22	0.21	0.19	0.18

There has been an increase in the death-rate from the forms of berculosis other than pulmonary. The number of cases notified during e year of other forms of tuberculosis was 85. This is an increase of notifications over that of the previous year.

TUBERCULOSIS SCHEME.

The Council have provided a Tuberculosis Dispensary at 50, Horton Lane, near the centre of the city, which fairly well serves the whole area. At the Dispensary are the headquarters of the Tuberculosis Officer who is assisted there by an Assistant Tuberculosis Officer, a nurse, secretary and two clerks.

The Residential Institutions are three in number, namely:—(1) The Sanatorium at Grassington, where early cases are treated; providing accommodation for 52 men, 52 women, and 48 children, a total of 152 beds.

- (2) The Bierley Hall Hospital, where later cases are treated; providing accommodation for approximately 28 men and 28 women.
- (3) The Municipal General Hospital, St. Luke's, where late cases of Pulmonary Tuberculosis are isolated and treated.

At Grassington and St. Luke's cases of surgical Tuberculosis are also treated.

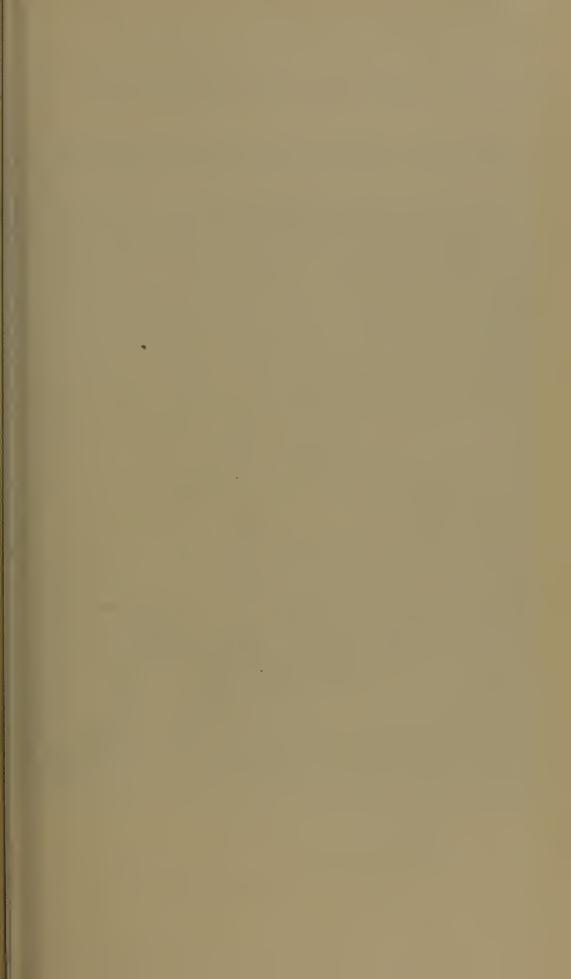

In the working of the Tuberculosis Scheme active co-operation takes place with the various Hospitals in the city and the medical profession, and especially the insurance practitioners. The arrangements for securing co-operation have generally worked well. Satisfactory arrangements have been made to co-ordinate the work of the Tuberculosis Scheme with that of the School Medical Service, and all cases coming under the notice of this service suspected of suffering from Tuberculosis are referred to the Tuberculosis Dispensary. Similar arrangements also exist for securing co-operation between the Maternity and Child Welfare Scheme and the Tuberculosis Scheme.

The Health Visitors are associated with the work of the Tuberculosis Dispensary and carry out, under the instructions of the Dispensary, all visitations and following up required by the Dispensary. At the same time they arrange for the examination of contacts either at the Dispensary or by the doctor notifying.

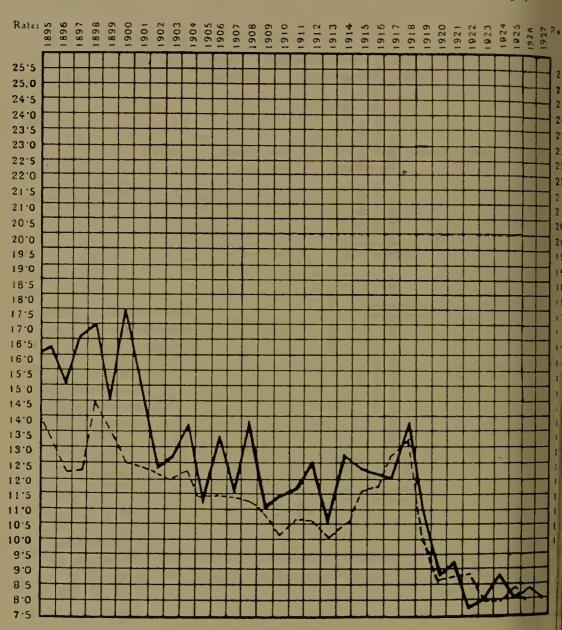

ANTI-TUBERCULOSIS CENTRE.

Report by H. Vallow, M.D., D.P.H., Tuberculosis Officer.

The Anti-tuberculosis Centre, or Tuberculosis Dispensary, is open for consultations on six sessions per week, one being a general evening session, and one an afternoon session, set apart specially for ehildren.

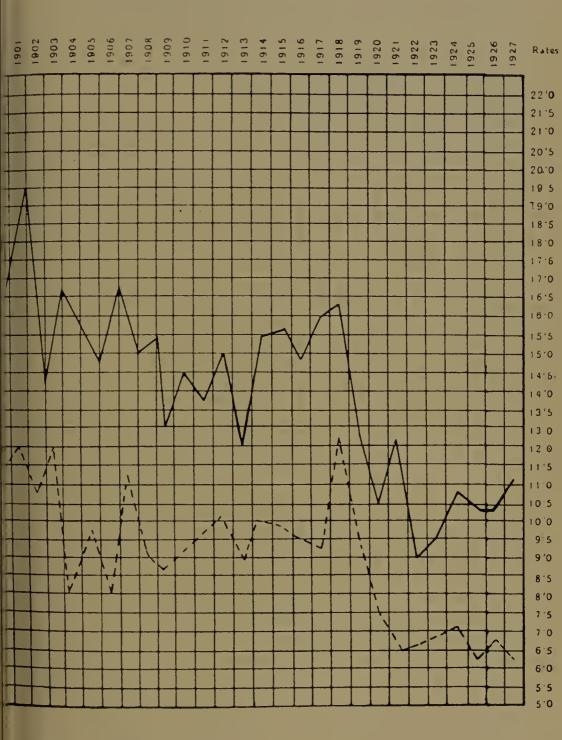

DEATH RATES FROM PULMONARY TUBERCULOSIS PER 10,000 OF THE POPULATION IN ENGLAND AND WALES AND BRADFORD, 1895-1927.

England and Wales indicated by —————Bradford indicated by

EATH RATES FROM PULMONARY TUBERCULOSIS PER 10,000 OF THE POPULATION IN BRADFORD ACCORDING TO SEX.

Male rate indicated by

Female rate indicated by -----

The number of attendances during the year was 3,472; of these 428 ere new cases and 263 contacts. The diagnosis arrived at in these cases seen from the following tables:—

	Ad	Adults		dren	To	tal
	Male	Female	Male	Female	Male	Female
A. New Cases—						
(a) Definitely Tuberculous	 99	91	54	35	153	126
(b) Doubtfully Tuberculous	 26	10	10	7	36	17
(c) Non-Tuberculous	 34	24	21	17	55	41
B. CONTACTS—						
(a) Definitely Tuberculous	 17	26	11	14	28	40
(b) Doubtfully Tuberculous	 4	1 1	3	3	7	4
(c) Non-Tuberculous	 46	51	43	44	89	95

The definitely tuberculous cases, divided into pulmonary and nonulmonary, are shown in the following table:—

		Pulmo	nary		N	on-Puli	monary	7
	Adı	ults	Chil	dren	Adı	ults	Children	
	Male	F'male	Male	F'male	Male	F'male	Male	F'male
A. New Cases B. Contacts	94 15	80 26	19 4	17 6	5 2	11 0	35 7	18 8

The number of patients transferred from other areas and "lost ght of" cases returned was 30, and the number transferred to other reas and "lost sight of" was 48.

The number of cases written off the Dispensary Register as cured, jagnosis not confirmed, or non-tuberculous is given in the following the:—

	Adults		Chil	dren	Total	
·	Male	Female	Male	Female	Male	Female
(a) Cured— Pulmonary Cases Non-Pulmonary Cases	18 4	10	6 7	5 5	24 11	15 10

The Health Visitors have paid 3,476 visits to the homes for Dispensary purposes.

The Tuberculosis Officer visited the homes of 150 cases, 50 of thes visits being made along with the medical practitioners in attendance Eight hundred and seventy-five consultations took place at the Anti-Tuberculosis Centre with medical practitioners.

The number of attendances of non-pulmonary cases at orthopædiout-stations for treatment and supervision was 2,898. The number of attendances at General Hospitals, or other Institutions approved for the purpose, of patients for

- (a) "Light" treatment was 2,932
- (b) Other special forms of treatment ... 370

The number of patients to whom Dental Treatment was given wa 306.

The number of

- (a) Specimens of sputa examined 1,643
- (b) X-ray examinations 234

The number of persons on the Dispensary Register on January 1s 1927, was 1,152, and on December 31st, 1927, 1,297. The number of insured persons on the Dispensary Register on December 31st was 73 and the number of insured persons undergoing domiciliary treatment of the 31st December was 225. The number of reports received in respect of insured persons on Form G.P. 36 was 41.

Residential Treatment. Patients have been sent to the Sanator and Hospitals as required, and the following return shows the extent this residential treatment. Institutions:—Grassington Sanatoriur Bierley Hall Hospital, and St. Luke's Hospital (Tuberculosis Section

SPECIAL METHODS OF DIAGNOSIS AND TREATMENT.

In the early days of Dispensary work it was necessary to deal with large number of advanced infective cases of pulmonary tuberculosis. There has been a marked reduction in the number of these cases. They have been replaced by cases of less severity and by those in which there is a suspicion of tuberculosis, considered by the Ministry of Health in Memo. 37 T as "doubtful cases."

It has been necessary to adopt all the known modern methods of cientific diagnosis and to utilise the recent improvement in X-ray liagnosis. It is essential that the X-ray findings should be interpreted n connection with the clinical signs. This is not possible under the irrangement of sending cases to a central X-ray Department. The Fuberculosis Officer should have the opportunity of seeing the patient 'screened' at the time of his examination.

Artificial Pneumo-Thorax Treatment has been continued and extended in suitable cases during the year. The results have already ustified its adoption, and it has been necessary to purchase a further apparatus which can be carried to the home.

Return shewing the immediate results of Treatment of Patients and of observation of doubtful cases discharged from Residential Institutions during the year 1927.

Discharged	 156	40	43	25	199	65
Remaining 31/12/27	 41	26	24	13	65	39

Of the adult cases discharged 18 men and 4 women stayed under one month. The reasons for this short stay were, 15 men and 2 women ook their discharge against medical advice, 7 men and 2 women were ransferred to St. Luke's Hospital, and one man was transferred to the Bradford Royal Infirmary. Amongst the adult males, 113 had well-stablished pulmonary tuberculosis, the tubercle bacillus being found in 96, but not in 17, and 6 had other forms of tubercle; amongst the adult lemales 26 had well-established pulmonary tuberculosis, the tubercle pacillus being found in 14, but not in 12, while 7 had other forms of ubercle. Amongst the children, 23 boys and 9 girls had intrathoracic ubercle.

Average gain in weight		 14 10/16	$12\ 2/16$

All the patients gained in weight

In all, 805 sputum examinations were made, 465 by the ordinary direct method, and 340 after concentration. In 15 instances tubercle bacilli were demonstrated in the sputum after concentration when results had been negative with the direct method. During 1927 the dentist visited the Sanatorium periodically, and extracted 229 teeth, filled 20 teeth, scaled 8 teeth, made 2 dentures and 1 repair, and various minor operations.

The table showing results of treatment is given on the following page, and from this table it is clear that the great majority in all the A. sub-classes and I.B and II.B are likely to improve with sanatorium treatment. Of the cases in III.B. about 66 per cent. of them will benefit, but very few cases in any of the C. sub-classes are likely to improve.

	Result of Treatment of		Quiescent		Improved		No Material Improvement

present in the sputum. (2) Tubercle Bacilli absent. Each of these classes is further subdivided according to the extent of the lesion in the lung and the severity of the symptoms. For the extent of the lesion a modified Turban-Gerhardt system is used. Stage 1 being a localised lesion involving, if both lungs, not more than the extent of the lung above the clavicle in front, and above the spine of the scapula behind; whilst if only one lung is affected, a lesion extending not lower than the second rib in front and the spine of the scapula behind is indicated. Stage 2 indicates a slight lesion up to one lobe, or a severe lesion of half a lobe. Stage 3 includes all other cases. The letters A. B. C. are used to denote severity of symptoms in each stage. A denotes constitutional disturbance absent or slight. B. intermediate between A. and C. severe constitutional disturbance is in each case estimated by degree Tubercle NOTE ON CLASSIFICATION: -Pulmonary Tuberculosis cases in Adults are sub-divided into two classes-(1) pyrexia, tachycardia, dyspnoea, malnutrition.

BIERLEY HALL HOSPITAL.

L. G. WHITE, M.R.C.S., L.R.C.P, Medical Superintendent.

The Hospital is used for semi-advanced cases of tuberculosis amony women and children. Non-pulmonary cases among children are also admitted. The records show that great improvement takes place frequently as a result of treatment here enabling the patient to continu treatment elsewhere on more strict sanatorium lines. The child patient have almost invariably done well.

The number of patient days was for women 9,702 and for childre 6,620, giving an average number of beds occupied of 26.6 wome and 18.1 children.

The following table shows the admissions to and the discharge and deaths at Bierley Hall Hospital during the year 1927:—

	Women	Chil	dren	Total	
		Boys	Girls		
Remaining 31 12 26	21	10	9	40	
Admissions	. 93	19	16	128	
Discharges	3 63	19	17	99	
Deaths	18		-	18	
Remaining 31/12/27	33	10	8	51	

The classification of cases treated and the results are as follows:-

			Women		Chil	dren
			No.	Improved	No.	Improved
Early Intermediate Advanced Non-Pulmonary Observation	•••	•••	 33 13 69 6 10	33 12 40 5 10	8 1 2 28	8 1 27

With one exception all early and intermediate cases showed son improvement and gain in weight whilst in hospital. Only two childrenshowed no improvement at all, these being advanced pulmonary case. All the non-pulmonary cases except two improved, as also did to observation cases.

(C). VENEREAL DISEASES.

The Centre at the Municipal General Hospital is well equipped, and conveniently situated so as to serve the whole area. In the Municipal General Hospital itself beds are provided for indoor treatment of venereal disease in its various forms, and the provision made is adequate.

The number of new cases from the area of the City of Bradford and the attendances at the Venereal Diseases Centre since its opening are shown in the following table:—

Year		ereal eases		enereal eases	Attendances		
	Males	Females	Males	Females	Males	Females	
1917 (9 months)	149	127	18	33	801	645	
1918	200	175	34	41	1,604	1,639	
1919	583	235	79	42	10,990	4,011	
· 1920	627	311	121	31	21,129	9,174	
1921	457	184	144	29	28,676	11,390	
1922	403	164	126	31	23,162	7,863	
1923	359	134	110	44	21,398	7,565	
1924	315	123	103	50	17,390	5,615	
$ 1925 \dots \dots $	248	142	143	42	13,294	4,859	
1926	374	119	43	29	20,095	4,957	
1927	312	115	99	53	20,116	5,369	

This table does not throw much light upon the incidence of venereal disease in the city, but it serves to show that there have been large numbers and more frequent and regular attendances since the passing in 1925 of the local powers of compulsory notification. The existence of these powers has had a wholesome effect in causing cases to continue until recovered under treatment either at the Municipal Centre or by private practitioners. There is no reason to believe that these powers have had any effect in deterring persons from seeking treatment; they have operated rather in securing better treatment. From the records of 1927 it would appear that there has been a decrease in the amount of syphilis, but an increase in the amount of gonorrhæa in the city, but it is impossible to state with any accuracy that this change has taken place.

The facilities which the Council offer for diagnosis and treatment in venereal disease are adequately brought to the notice of the public, and they have been taken advantage of fairly well. It may be taken for granted that the cases which come under notice are less dangerous to the community as a whole than the cases which do not take

advantage of the facilities offered, as the spread of venereal disease is largely due to the partial and very incomplete treatment which many patients undergo. In the intervals between the clinics at the centre, facilities are provided for irrigation of cases, and these arrangements have been of great service. The medical practitioners in the area have been fully informed of the facilities offered and of the arrangements under which they can consult with the medical officer of the centre. The pathological examinations are done at the City Laboratory, both for the Centre and for the medical practitioners generally in the area.

From this table it will be seen that the very large majority of aths from malignant disease arise from the disease affecting one or her of four sites, namely, stomach and œsophagus (439 deaths), ctum and colon (339 deaths), uterus (182 deaths), and breast (187 aths), these facts are in general conformity with those previously corded in Bradford and elsewhere.

The table on the following page shows the relationship of the raths from cancer in 1927 to occupation.

In 1927 there were 96 deaths from malignant disease in the Munipal General Hospital, St. Luke's; 29 in the Bradford Royal Infirmary; and 8 in other institutions in Bradford. Although less than 30% of e cases died in hospital the proportion of cases of malignant disease hich in the course of their illness are treated in hospital is very large.

During 1927 arrangements were made for the supervision and bllowing up of cases of malignant or suspected malignant disease. A stem of voluntary notification of such cases was begun and an vestigation officer appointed, to enable a suitable recording and connuous supervision of the cases to be secured. The whole medical offession in the city have united to aid the work, and under a local neer committee and with the help of the hospitals and their officers, the arrangements have been made that it is hoped no case of tumour alignant or suspected malignant will be lost sight of.

Bronchitis)	4	2 27		— 12		119 89	248 68

Rheumatic Fever and Organic Heart Disease. Deaths, 437; Mortality rate per 1,000, 1.49.

The following record shows the deaths occurring from these diseases during the past ten years.

	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Rheumatic Fever Organic Heart Disease	13 391	18 406	19 398	15 353	9	15 420	21 431	19 423	13 421	9 428

The ages at death of the total number of fatal cases of rheumatic fever during the past ten years has been as follows:—

Age Incidence of Deaths from Rheumatic Fever, 1918-27.

	Under 5 years	5-15	15-25	25-45	45 65	Over 65 years
Deaths	4	35	22	24	32	32

Deaths from organic heart disease in 1927 occurred in 174 cases amongst males, and in 254 cases amongst females. This gives a death-rate of 1.29 per 1,000 amongst males, and 1.60 per 1,000 amongst females. From the table which follows it will be seen that the higher incidence of deaths amongst females occurs at later ages of life.

Deaths from Organic Heart Disease, 1927, according to Sex and Age.

V.—MATERNITY AND CHILD WELFARE.

(A) INFANT MORTALITY IN 1927.

The Infantile Mortality Rate for the year was 92 per 1,000 births. This rate, when corrected for the variation in the birth-rate, becomes 91 per 1,000 births, or the same as the corrected rate for 1926.

CORRECTED INFANTILE MORTALITY RATES FROM 1918.

Year	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927

1920	27.8	8.8	5'8	3.6	46	35
1921	29'9	6.8	4'9	2.8	45	35
1922	22.5	6.5	5.0	3.8	37	34
1923	22.9	5.3	4.0	4.2	36	32
1924	27.3	4.8	5.0	2.4	40	33
1925	23.8	4'1	4.8	3.1	36	32
1926	24.0	6.2	5.2	3.2	39	32
1927	25.0	5'8	3.0	2.5	36	32

This table shows that the death rate among young infants from prenatal and neonatal causes is declining, but the improvement is very slow.

In the remainder of the first year of life, the Infantile Mortality Rate per 1,000 births is given in the following table. It has been necessary in this table to make certain corrections for the variations of the birth rate in Bradford. These corrections were explained in the report for 1920. The table on page 82 shows the state of infantile mortality in Bradford each year from 1881, with the average infantile mortality rate for five yearly periods.

Infantile Mortality Rate per 1,000 Births after the First Month of Life, from 1909.

	1 to 3	months	3 to 6	months	6 to 12	months

[°] The figures of infantile mortality for Bradford for these years are founded on numbers of births corrected in each year.

Illegitimacy and Infantile Mortality. Since 1918 the number and the percentage of illegitimate births are shown in the following table:—

ILLEGITIMACY IN BRADFORD FROM 1918.

Year	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Number Percentage	326	283	359	355	281	275	285	227	260	255
of total births	8.4	7.0	6.0	6.5	5.4	5.5	5.4	4.2	5'5	5.9

The infantile mortality rate is always very much higher among illegitimate than among legitimate infants. The following table shows the corrected Infantile Mortality Rates amongst these two classes of infants for the past ten years:—

CORRECTED INFANTILE MORTALITY RATES AMONG ILLEGITIMATE AND LEGITIMATE INFANTS.

Year	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927
Illegiti- mate	246	223	176	175	157	201	144	123	142	133
Legitimate	112	105	99	104	83	72	89	94	89	91

Place Distribution of Infantile Mortality. The Ward which showed the highest infantile mortality rate was Exchange, where the rate was 185 per 1,000 births, while North and Tong Wards showed rates above 120 per 1,000. The rate was lowest in the Thornton, Great Horton and Eccleshill Wards. The record of infantile mortality for the past 10 years in the different wards of the city is shown in the table on the following page. This shows that the infantile mortality rate in the four central wards of the city is maintained at a very high level. Tong is not so bad as last year, but the death-rate among babies in the North, the South and Exchange Wards is locally notorious.

INFANT MORTALITY RATE PER 1,000 BIRTHS, IN WARDS, FOR THE YEARS 1918 to 1927.

Causes of Death in Infantile Mortality. The table on the following page shows the deaths from stated causes under one year for the past ten years. From it the conclusion is come to that the infant death-rate was maintained at its present level chiefly through the prevalence of measles and pneumonia among the infant population, affecting, of course, children in the later months of the first year of life.

Premature Birth is the largest cause of death, but showed a slight decrease last year. The infantile mortality rate arising from Premature Birth, Congenital Defects, and Atrophy, Debility and Marasmus, is shown in the table below.

Infantile Mortality per 1,000 Births from Developmental and Wasting Diseases in Bradford since 1918.

Cause of Death	1918	1919	1920	1921	1922	1923	1924	1925	1926	1927

(B) MATERNITY.

Supervision of Midwives. This work is undertaken by a woman medical officer of the Maternity and Child Welfare Staff, with a nurse assistant inspector of midwives. The number of midwives practising in Bradford on the 31st December, 1927, was 68, of whom 64 held the Certificate of the Central Midwives Board by examination, or its equivalent, while 4 were on the roll as bona fide practitioners before the boasing of the Midwives' Act, 1902. Inspection of the midwives' work was carried out on 256 occasions, of which 167 were routine inspections and 89 special inspections. In accordance with the provisions of the Maternity Homes Act, 1927, maternity homes have been registered and inspected regularly throughout the year.

In Bradford the midwives attended in 1927, 3,207, or 74 per cent. of the registered births. The number of cases attended by each midwife has varied from none to 203; their work is seen in the following table:—

Number of Cases Attended by Midwives, 1927.

	Trai	ned Midwives	Untrai	ned Midwives
Number of Cases	No.	Total Cases	No.	Total Cases
Over 150	5	877	- 0	_ `

,				
Total	64	3158	4	49

The number of cases now attended by untrained midwives is very small indeed, amounting only to about 1.5 per cent. of the total attended by midwives.

The number of notifications of sending for medical help was 486, or 15 per cent. of their cases. In 404 cases medical aid was called in on account of the mother, and in 82 cases on account of the child. The reasons given for medical aid in the case of the mother were as follows:—Ruptured Perineum, 127 cases; Uterine Inertia, 58; Malpresentation, 31; A.P. Hæmorrhage, 17; Pyrexia, 16; Adherent Placenta, 17; P.P. Hæmorrhage, 17; Contracted Pelvis, 37; Premature Birth, 18; Chest Trouble, 5; Debility, 15; Eclampsia, 3; Heart Trouble, 1; Abortion, 10; Dead Fætus, 7; Mastitis, 2; Albuminuria, 5; Placenta Prævia, 4; Œdema, 7; Abnormal Condition (not due to pregnancy), 19.

In the case of the child the reasons for sending for medical aid were as follows:—Dangerous Feebleness (premature or otherwise), 35; Inflammation of Eyes, 24; Cyanosis, 1; Convulsions, 3; Malformations, 1; Cleft Palate (Hare Lip), 2; Skin Disease, 4; Jaundice, 5; Spina Bifida, 2; Abnormal Condition, 11.

Notices were sent to the Local Supervising Authority of the deaths of 3 infants under the care of midwives before the arrival of a medical practitioner. The midwives reported 35 still births, or about 1.4 per cent. of their cases.

The number of cases attended by municipal midwives in the city was 920, or 28.7 per cent. of the total cases attended by midwives in the city. The average number of cases attended in 1927 by each municipal midwife was 115. The following statement shows the work done by municipal midwives in the two years, 1926 and 1927, as compared with the total work by midwives in the city.

WORK OF MUNICIPAL MIDWIVES.

	19	26	19	27
	All midwives	Municipal midwives	All midwiy s	Municipal midwives
Births attended	3256	926	3207	920
Medical Aid Notices	529	198	486	180
Still Births	44	15	35	13
Death of Mother	_		_	_

Total Visits to Patients	41783	11619	41216	12878
Ante-Natal Visits	8223	2975	5123	2375

Under the Midwives' Act, 1918, the total number of claims for pidwifery fees sent in by medical practitioners during 1927 was 244. The Local Supervising Authority determined to recover in full 152 of these claims, and in part 20, leaving 72 paid in full by the Authority. The total cost to the Authority of these claims was £115 1s. 0d.

Ante-natal Work. When an expectant mother is attended by a nidwife other than a municipal midwife, home supervision of the case s carried out by health visitors, who during 1927 had 398 expectant nothers under observation before the birth of the child, no less than ,318 expectant mothers being visited by either municipal midwives or nealth visitors in 1927.

The total number of patients attending the various ante-natal centres in 1927 was 702. The total number of attendances amounted to 2,561.

Still Birth. The number of still births notified in 1927 was 195, or 4.5 per cent. of the live births registered.

Deaths of Women in Childbirth. In the tables at the end of the report 29 deaths occurring in the puerperal state in the city are shown.

These deaths are classified in three tables, which follow, according to the age periods, the duration of pregnancy, and the conditions from which the deaths arose. From these tables it will be noted that the number of deaths from septic conditions is very high at the age period 30-35 years.

DEATHS IN CHILD BIRTH. (1) Age Period and Classifed Cause.

The accommodation for Maternity cases available in Bradford ludes 10 beds in the Bradford Maternity Hospital, 60 beds at the inicipal General Hospital, and about 6 at St. Monica's Home.

The maternity cases at the Municipal General Hospital numbered 6, and are reported on page 107.

The number of maternity cases dealt with at the Bradford atternity Hospital in 1927 was 185, the number of live children born is 179, including 15 premature births, 5 of whom died within 14 days, d the number of still births was 6.

The number of maternity cases dealt with at St. Monica's in 1927 as 84, the number of live children born was 79, of whom 2 died, and 2 number of still births was 5.

The number of puerperal fever cases notified in 1927 was 29, and of erperal pyrexia 45, of which 39 were admitted to hospital and 35 rsed at home. There were 13 deaths from puerperal fever.

The total number of cases of ophthalmia neonatorum notified was. All these cases were visited and supervised, and the majority had spital treatment as outpatients. Six were admitted to St. Luke's ospital with the mother.

(C) INFANCY.

During the year 1927 the number of births registered in Bradford s 4,316, while the number notified under the Notification of Births t, 1907, was 4,368.

RECORD OF PREVIOUS YEARS.

	1922	1923	1924	1925	1926	1927
Births registered	5220	5290	5010	4827	4708	4316
Births notified	5119	5240	4897	4849	4702	4368
Notifications to 100 registrations	98'1	99.1	97.7	100.2	99.9	101'2

The comparisons here are not quite accurate, as the times of notification and registration are different and the births to be notified include still births which are not included among those registered.

Time of Receipt of Notifications of Birth in 1927.

Demonstratif in a				Total	Per cent				
Persons notifying	Within 2 days	3-7 days	l-2 weeks	2-3 weeks	3 −4 week	1—2 months	2—3 months	10(3)	received late
Doctor	324	131	24	6	3	3	_	491	34.0
Midwife	2426	658	8	1	2	1	- 1	3096	21.9
Father	49	33	4	2	1	_		89	44.9
Doctor and Midwife	80	18		_		_		98	18-4
Father and Doctor	2	_		-	_	_	_	*2	0.0
Institutions	474	116	-	1	-	1	_	592	20.0
Total	3355	956	36	10	6	5	_	4368	23.2

Following the receipt of the notification a very large proportion the births are visited. Speaking generally all cases notified by midwix are visited as soon as possible after the birth as well as those cases w doctors in attendance where the home circumstances seem to warrant The number of infants notified in 1927 visited was 4,128.

BIRTHS VISITED IN 1927.

Person in		Times between Birth and Visit								
attendance	1 week 2 weeks 3 weeks 4		4 weeks	Over 4 weeks	Total					
Doctor	91	705	92	61	27	976				
Midwife	2411	126	1	1	1	2540				
Institution	_	532	60	11	9	612				

Of the 4,128 births visited it was considered that 131 requivisitation once only during the first year, while 3,997 were selected more frequent revisitation during their first year of life. The transfer of visits paid in 1927 to infants was 42,150.

FEEDING OF INFANTS UNDER VISITATION COMPLETING FIRST YEAR.

Work of Mothers in 1927.

	O	utside the ho	me	Inside
	Factories	Other Work	Total	the Home
Within six months before birth	498	189	687	2294
Within six months after birth	455	188	643	2338

This table as compared with the previous year shows a higher portionate number of mothers employed outside the home before th and after birth.

Of the 687 mothers working within six months before confinement were employed within three months before the birth, and of the 643 others working within six months after confinement 242 returned to rk within three months after the birth.

The number of cases of epidemic diarrhœa coming under notice and ited by the health visitors last year was 16.

Child Centres. The Local Authority conducts 10 Child Clinics in City, at each of which a medical officer attends. The principal ld clinic is situated in Morley Street, and it is open every week-day prining and afternoon except Thursdays and Saturdays, when it is en in the morning only. The following table shows the location of ch clinic, the days on which it is in operation, and the total attendances t year.

CHILD CLINICS IN BRADFORD.

Low Moor	. Tuesday	Afternoon only	1,336
West Bowling	. Monday	Afternoon only	1,690
*Lapage Street	Thursday	Afternoon only	1,780

^{*} This Centre was opened in March, 1927.

These Centres are all doing excellent work and are keenly appreciated by those who take advantage of their services. They are proposed and special educational institutions for instruction to mothers on he to keep babies and young children healthy. Mothers seeking sucknowledge are welcomed, especially if the baby is well; it is too late often to seek this information when the baby is ill. All mothers require this knowledge, and the work of the Centres is directed to benefiting the child through the mother, whose co-operation is most desired.

The number of attendances in 1927 at the Central Clinic was 17,25 and the number at the District Clinics 24,102, an average of 34.5 cas per session at the Central Clinic, and 34.3 cases per session at 1 District Clinics.

The number of children registered for the first time at the Child linics in 1927 was 2,341. The following table shows the growth of the work since its inception.

CHILD CLINICS.

Year	New Cases	Total attendances	Average weekly attendances	Average daily attendances
1914	2,488	31,193	600	120
1915	1,987	28,192	540	108
1916	1,998	23,490	452	90
1917	1,721	19,194	369	74
1918	1,606	17,068	328	65
1919	1,810	19,495	375	75
1920	2,832	28,829	554	110
1921	2,872	35,784	688	137
1922	2,115	25,868	497	99
1923	1,926	24,320	468	93
1924	1,822	24,952	480	96
1925	3,102	35,937	680	136
1926	2,551	38,279	736	147
1927	2,341	41,337	795	159

It has been found advisable to arrange the work at the Central nic into sessions for infants, sessions for children, and "family" sions attended by mothers who have an infant and one or more ldren.

At the Branch Clinics, which are attended for the most part by mothers with families—infants and young children are dealt with at each session.

In the Nursing Mothers' Ward 400 cases paid 837 attendances, and 86% of the babies in question left the ward thriving and gaining normally.

Death-rate Among Young Children. The mortality rates among children from 1—2 years and 2—5 years are seen in the following tables. The number of cases of Measles coming under notice under 5 years of age was 3,386, of whom 76 were removed to municipal hospitals. The number of cases of Whooping Cough under 5 years was 388.

MORTALITY RATE BETWEEN 1 AND 2 YEARS PER 1,000 PERSONS LIVING AT THESE AGES.

(D) VISITATION AND OTHER WORK.

The Health Visitors paid 78,557 visits to cases during the year. Of these, 703 were made to ante-natal cases, 42,150 to infants under one tear, 4,128 being primary visits, 27,695 to children between 1 and 5 tears of age, 3,476 to tuberculosis cases, 16 to cases of infective interitis, 3,478 to cases of measles, 857 to cases of whooping cough, and 182 to nursing mothers and other cases.

The main voluntary effort in connection with Maternity and Child Welfare in Bradford is undertaken by the Bradford Maternity Care committee, which still continues its educational work among mothers uttending various centres. Mothers are instructed in dressmaking, ewing, knitting, cookery, and mothercraft, by experienced teachers. There are four centres, namely, Wakefield Road, Otley Road, Lilycroft, nd Green Lane, with 5 sewing classes and one cookery class. otal number of mothers registered at the classes is 192, and they made 3,709 attendances, with an average weekly attendance of 15. During he year 1,072 new garments were made in the classes, and over 200 vere re-made from old clothes brought by the mothers. There was also good proportion of garments knitted by the mothers. At the Ante-Natal Clinic mothers can purchase most of the requirements for the onfinement, and also have baby garments cut out of the simplest and nost suitable patterns. A Maternity Box is available for the use of the poorer members at the time of their confinement. The Holiday Home at

Grassington continues to be very successful, 131 mothers and 217 children having visited the Home. Out of that number 36 mothers paid for themselves and their children, 15 mothers were sent to the Home by the Health Committee, 6 mothers by the Guild of Help, 67 by the Bradford Hospital and Convalescent Fund, and 7 by other organisations. Eightyone children were sent by the Victoria Children's Convalescent Fund.

The dental work done in connection with the maternity and child welfare scheme is shown on page 120.

VI.—BACTERIOLOGICAL AND PATHOLOGICAL WORK.

REPORT BY THE CITY PATHOLOGIST, M. A. C. BUCKELL, M.B., B.S. (London), D.P.H.

The work carried out by the Laboratory in 1927 shows a considerable increase on all previous records; 17,769 specimens have been dealt with. This gives an increase of 2,094 specimens over last year return, which previously constituted the record for this Laboratory.

Number	of	Specimens	examined—
--------	----	-----------	-----------

ANTHRAX.

Human. One suspected case was dealt with and proved negative

Wool, etc. During the year 714 samples of wool, etc., have be examined for Anthrax; of these 93 were from local sources and 621 from the Government Wool Disinfecting Station at Liverpool. Three of 93 local samples were found to contain B. Anthracis, 2 out of 24 samples of Turkish Mohair and dust, and 1 out of 8 samples of Tunisian G. Hair.

Two hundred and sixty-six samples of disinfected wool, etc., we received from the Disinfecting Station; in none of these was Anth detected. Amongst 355 samples of Raw Wool, etc., from the Disinfing Station B. Anthracis was recovered from:—

Milk.

The milk supply of the Municipal Milk Depot has been examine each week. Ninety-eight samples of "Grade A Tuberculin Tested milk were examined; of these 84 contained no B. Coli in 0·1 cc. Of hundred and forty-eight samples from other sources gave 52·7% with 1 B. Coli in 0·1 cc. All the sources were found to be free from infection by B. Tuberculosis.

Two hundred and seventy-three samples were received from the Ci Food Inspector; of these 45.42% were free from B. Coli in quantiti of 0.1 cc.

This figure is not strictly comparable with last year's 44.25%, as larger proportion of samples were received in the summer in 1927 th

1926, thus the apparent slight improvement in results is really a reater one than appears from these figures.

373 samples of milk from all sources were submitted to a biological st for B. Tuberculosis; 6.4% were found to contain the organism.

Some of these samples were duplicated from the same source, and it impossible from this figure to draw any conclusion as to the evalence of B. Tuberculosis in the milk supply of the city.

ATER.

The bacteriological examination of samples of water from the city ter supplies continues to give unsatisfactory results.

dog

Shell Fish. One thousand five hundred and seven shell fish (Oysters, ussels and Cockles) were examined during the year, and the results ow that the majority of Mussels and Cockles are heavily polluted, and a potential source of danger to health unless thoroughly cooked fore being consumed.

Ice Cream. A few samples (33) of Ice Cream were examined, and we in many instances results showing that further control of this dustry is highly desirable in the interests of public health.

VII.—HOSPITAL ACCOMMODATION.

In the first portion of this report reference is made to the hospital ecommodation of the City; in this portion further details of the hospitals nder the control of the Local Authority are given.

(A) MUNICIPAL GENERAL HOSPITAL.

REPORT BY MEDICAL SUPERINTENDENT, B. HOLROYD SLATER, B.A., M.B., F.R.C.S.

I have the honour to present the Eighth Annual Report on the orking of the Bradford Municipal General Hospital, dealing with the eriod from January 1st to December 31st, 1927.

The continued growth of the hospital since it came under municipal butrol is shown in the following comparisons:—

	1927	1926	1925	1924	1923	1922	1921	1920
o. of Admissions	6707	6906	6565	6139	5608	5141	4482	3804
o. of Births in Hospital	539	592	485	466	463	360	372	158
o. of Operations Performed	1973	2249	2018	1824	1799	1419	752	428
werage time spent in Hospital								
days	$29 \cdot 9$	30.4	28.7	31.4	$32 \cdot 5$	$28 \cdot 3$	30.1	36.1

From the above table it will be seen that since the first year of unicipal control the number of patients admitted has increased by 3·3 per cent., the number of births by 241·1 per cent., and the number operations by 361·0 per cent.

MATERNITY DEPARTMENT.

The attendances at the Hospital Ante-Natal Clinic numbered :-

New Pat	ients	 	 	526
Others		 	 	1122

1648

In the Maternity Wards there were 539 live births and 57 stillbirths. he proportion of stillbirths was 9.6 per cent., as compared with 6.4 per ent. last year, and 8.6 per cent. in 1925.

There were 8 maternal deaths.

DEATHS.

There have been 929 deaths in hospital during the year, as compared ith 874 in 1926. The relation between the ages of patients and the umber of deaths is shown in the subjoined table:—

Years of age	-1	1–2	2–10	10–20	20–30	30–40	40–50	50–60	60–70	70–80	80–90	90–100
Number of Deaths	67	12	20	18	60	80	96	158	193	183	39	3

The proportion of deaths to admissions has been 12.8 per cent., as gainst 11.6 per cent. last year. The number of deaths within three ays after admission was 226, as against 186 in 1926.

CITY HOSPITAL, LEEDS ROAD.

REPORT OF THE MEDICAL SUPERINTENDENT, JAMES T. KITCHIN, M.D., D.P.H.

On the 1st January, 1927, there were 80 cases in hospital, and 892 ses were admitted during the year, making a total of 972 under eatment. Of these 839 were discharged cured or relieved, 57 died, and were in hospital on the 31st December.

The general mortality rate among the cases was therefore 5.6 per nt.

The following tables show details of the nature of the cases:-

There were 11 cases of Enteric Fever, one of whom died. The dmissions and deaths from other diseases were as follows:—Measles, 4 cases, 17 deaths; Whooping Cough, 20 cases, 2 deaths; Erysipelas, 7 cases, 5 deaths; Cerebro Spinal Meningitis, 2 cases, 1 death; Tuberculous Meningitis, 1 case, 1 death; Septicæmia, 1 case, 1 death; Infective Enteritis, 1 case, 1 death; Lobar Pneumonia, 2 cases, 2 deaths; Infonic Otitis Media, 1 case, 1 death; Chicken Pox, 40 cases; Influenza, 8 cases; Various Rashes, 5 cases; ther diseases, 39 cases; all with no deaths.

Throat, Nose and Ear Cases. The local authority has treated in pspital for some years operative cases of diseases of the throat, nose and ear occurring among children referred from various clinics. The bllowing is a summary of the cases treated in 1927:—940 for tonsils and adenoids, 5 cases of mastoiditis, 8 various nose cases, and 55 other ases; 1,008 cases in all. This is a very great increase in the work fitherto done in this direction.

VIII.—HOUSING.

(1) New Houses in 1927. The average number of new houses cerfied as fit for human habitation annually during the five years preceding 913 was 475, and the following statement shows the number so certified the year since then.

Vear	New Houses	Year	New Houses	Year	New Houses
1913 1914 1915 1916 1917	349 394 306 128 32	1918 1919 1920 1921 1922	38 6 38 446 466	1923 1924 1925 1926 1927	245 694 1509 2193 2029
1913-17	242 (average)	1918-22	199 (average)	1923-27	1334 (average)

The number of new houses built during the past ten years in each ard and certified as fit for human habitation in accordance with the adford Waterworks and Improvement Act, 1871, is shown in the table 1 the following page.

The position with regard to house building by the City Council on the 31st December, 1927, was as follows:—The number of houses under contract at the end of the year was 1,348, of which 1,162 were of the "A" type and 66 of the "A2" type, and 120 of the "B" type. The number of houses in course of erection then was 988, while during the year 1,115 houses had been completed and occupied. In addition to these there were 255 houses, 194 of which were subsidy houses, being built by private enterprise at the close of the year.

New Buildings.

Showing number of New Buildings certified as fit for habitation in each of the Wards, and in the whole City, during the years 1918-1927.

- (2) Overcrowding. Many very serious cases of overcrowding connue to come to the knowledge of the department during the year, but spite the increase in the provision of houses there still remains a great arcity of housing accommodation, which complicates the position. On e 31st December, 1927, the number of applicants for new houses was proximately 2,784, 658 of whom are living in apartments.
- (3) White Abbey Area Improvement Scheme. With regard to the theme 67 per cent. of the properties have been acquired; 29 per cent. reements to purchase have been entered into; and negotiations were occeding at the end of the year for the remaining 4 per cent. Substitum accommodation has been provided in the completed tenement vellings on the Longlands Site, and the 42 houses at Musgrave Road, cleshill, and other accommodation is being provided on other sites thin the city. One hundred and eleven buildings have been demolished d sites cleared.

· (4) Housing Act, 1925—Prosecutions.

Nature of Offence	No. of Cases	Result
Section 3. Recovery of monies incurred by works executed in default.	47	Orders made by payment in each case with costs. Total £444 4s. 0d., plus £23 9s. 6d. costs.
Section 11 (3). Disobedience of Closing Order.	7	Orders to quit made in 5 cases, and in the other two cases defendants were fined £2 and £1 respectively.
Section 12. Reletting houses ordered to be closed.	18	Sixteen cases were withdrawn on payment of costs, and in the other two cases the defendants were fined £5 and 10/- respectively.

(5) Housing Act, 1925—Appeals to the Ministry of Health.

		53
	(5) Number of dwelling-houses demolished in pursuance of demolition orders	60

IX.—MISCELLANEOUS.

(A) COMPULSORY REMOVALS.

During the year proceedings were instituted once under Section 56 f the Bradford Corporation Act, 1925, which provides for the removal

to an institution, upon an Order of a Court of Summary Jurisdiction, of:—

- (a) Any aged, infirm or physically incapacitated person who is residing in premises which are insanitary owing to neglect on the part of the occupier; or
 - (b) Any person suffering from any grave chronic disease.

This case was that of a female residing alone and aged 75 years. She was so physically enfeebled as to be unable to attend to herself or to keep her house in a fit and sanitary state.

The requisite Order for removal was granted by the Bench.

(B) GENERAL DENTAL WORK

The work carried out has followed the procedure of previous years. The amount of work done, as seen in the following table, shows an increase over the previous year, except in one or two instances.

The outstanding facts are :-

- (1) The increase in the number of expectant and nursing mothers who have accepted treatment, thus showing on their part a greater appreciation of the benefits of dental attention. The reluctance of this class of patient to undergo treatment is being gradually overcome.
- (2) The work done for pre-school children, showing the necessity of treatment to a child even before reaching school age. Children under two years of age have required treatment.
- (3) The work done for school children. This has been chiefly of a character outside the scope of the School Dental Clinic, such as providing dentures, regulation cases, crowns, and root treatments, and has been most important in rounding off the work of the school dentists.
- (4) The denture work. This is one of the most important parts of the work done, as will be realised by the fact of 143 cases having been completed during the year.
- (5) The Tuberculosis Sanatoria and Mental Homes have been visited periodically and all necessary work carried out, while St. Luke's General Hospital has been visited whenever necessary, and has indeed occupied no small amount of time in treatment.

TABLE SHOWING WORK CARRIED OUT AT THE DENTAL CLINIC DURING THE YEAR.

(C) AMBULANCE WORK AND DISINFECTION.

The ambulance facilities for the city are as follows:—At the City Fever Hospital there is provided a motor ambulance, which during 1927 removed 1,055 cases to Hospital. At the Municipal General Hospital three motor ambulances are provided, which in addition to removing cases to the General Hospital, also removed cases to Bierley Hall Sanatorium and the voluntary institutions in the city, involving 3,650 journeys, with a mileage of 18,477. The police maintain a motor ambulance for street casualties. Two motor ambulances are maintained for the removal of physically defective children to school and one motor ambulance is maintained at Grassington for the removal thereto of cases of Pulmonary Tuberculosis.

The total number of articles disinfected at the Disinfecting Station, Canal Road, was 8,275, as against 9,375 last year. The number of houses disinfected by the Disinfecting Officer was 1,052, as against 1,133 last year. In addition disinfection was carried out at the request of manufacturers, property owners, and others, for which charges were made amounting to £12 12s. 9d. The revenue from this source last year was £15 0s. 2d.

(D) PUBLIC MORTUARY AND CREMATORIUM.

During the past year 81 bodies have been deposited and 26 post-mortem examinations made in the Public Mortuary. Since the opening in October, 1910, 1,519 bodies have been deposited.

The remains of 50 persons were cremated during 1927 at the Scholemoor Crematorium, in comparison with 32 during the previous year.

The following table, prepared by the Cremation Society of Great Britain, shows the number of Cremations carried out in Great Britain since the year 1885.

CITY OF BRADFORD

ANNUAL REPORT

OF THE

SCHOOL MEDICAL OFFICER 1927

- 2. CO-ORDINATION.—The School Medical Officer is also Medical Officer of Health, and there is, as far as possible, co-operation between all branches of the Medical Staff dealing with childhood. For this purpose there is a joint Health and Education Medical Sub-Committee, which deals with questions referred from the Education Committee.
- 3. SCHOOL HYGIENE.—On the occasion of each routine inspection of the children at the School the Medical Officer surveys and reports upon the hygienic conditions of the School. In Schools where children have to come from a distance, facilities are provided for the warming of meals brought to School by the children, and where it is necessary arrangements are made for the children to be supervised by a teacher. Tickets for meals, at the Committee's Dining Centres, are obtained by the children in all the schools on payment of full cost, which is only very small. The undermentioned table is an analysis of the hygienic conditions:—

	1	Condition	ons found

4. MEDICAL INSPECTION.—(a) During the year 1927 a Routine Medical Inspection has taken place in every School in Bradford, he classes of children medically inspected, with the numbers in each lass examined, are as follows:—

(1)	Children admitted for the first time during	the	year	
	(Entrants)	• • •		4608
(2)	Children 8 years of age (Intermediates)			2694
(3)	Children expected to leave School during	the	year	
	(Leavers)	• • •		2864
(4)	Other Ages		• • •	594
(5)	Children attending Council Secondary Sch	iools	and	
	Bradford Grammar Schools			3999
(6)	Candidates for Secondary Schools			1056
(7)	Children attending Nursery Schools			332
(8)	Children attending Special Schools	• • •	• • •	367
				70 ~7.4
	Total	• • •	• • •	16,514

The total is 569 less than the number examined in 1926, which is accounted for by less children falling due for examination in the Code Groups, Entrants and Leavers.

- (b) There has been no material departure made in the Board's schedule of inspections.
- (c) Grave defects are in a large number of cases recognised in Bradford before the children arrive at School age through the agency of notification, health visitors, maternity and childwelfare centres and the like. On admission to School all grave defects noted by the School Teachers are notified to the School Medical Officer, and the children examined at once. A census of all children in the City of school age is taken biennially by the School Attendance Officers, and children who have reached five years of age and whose names are not on any School Register for mental or physical reasons, are reported to the School Medical Officer, who has each case either medically examined at the Clinic or obtains satisfactory medical evidence that the child is not fit to attend School. Many of these cases are treated at the School Clinics or Hospitals under the Authority's Scheme.

5. FINDINGS OF MEDICAL INSPECTION:-

CLOTHING AND FOOTGEAR.—The record of the 16,514 children examined during the year again shows an improvement over the figures of previous years. The percentage of those found with inadequate or unsuitable clothing was only 0.15, as against 1.09 in 1926 and 3.77 in 1925. Those found with inadequate or unsuitable footgear 0.59, as against 0.72 in 1926 and 2.05 in 1925.

Code Group	Numbers In-	Inac		othing or unsui	Footgear Inadequate or unsuitable				
	spected	В	G	Т	%	В	G	Т	%
Entrants	4608	2	5	7	0.15	10	6	16	0.35

Nursery Schools	332	1	-	1	0.3	-		_	
Totals	16514	11	13	24	0.15	43	54	97	0.59

NUTRITION.—The conditions found in 1927 are slightly worse than those found in 1926. At the Routine Inspections 5.43% were found below normal, as against 5.32% in 1926. At the Special Inspections held at the School Clinics 145 were recorded below normal in 1927, as against 154 in 1926. The following table records the findings of the School Medical Officers at the Routine Inspections:—

	Numbers In- spected	Boys				Girls				
Code Group		Above Nor- mal	Normal	Below Nor- mal	Em- acia- ted	Above Nor- mal	Normal	Below Normal	Em- acia- ted	
Entrants	4608	290	1893	146	1	$\phantom{00000000000000000000000000000000000$	${1855}$	159

Totals	16514	1025	6962	461	2	963	6667	433	1	

(a) UNCLEANLINESS.—It is very gratifying to note the gradual improvement that is taking place in the cleanliness of children. The following table records uncleanliness of head 0.92 per cent., uncleanliness of body 0.54 per cent., as against 2.01 per cent. and 1.62 per cent. in 1926, 3.48 per cent. and 2.37 per cent. in 1925, and 4.21 per cent. and 2.69 per cent. in 1924.

Code Group	Numbers ln- spected		He	ad		Body			
		В	G	Т	%	В	G	Т	%
Entrants	4608		42	47	1.02	18	15	33	0.72

Secondary Schools	3999	1	1	2	0.05				
Nursery Schools	332	ı —		_		1		1	0.30
Totals	16514	14	138	152	0.92	50	39	89	0.54

⁽b) MINOR AILMENTS.—It will be seen from Table IV., Group 1, that 7,595 cases of Elementary School children and 392 cases of Secondary School Children were treated at the School Clinics for minor ailments during 1927. The figures for 1926 were 7,596 and 400 respectively.

- (c) Tonsils and Adenoids.—At the Routine Inspections 1,655 Elementary and 334 Secondary School children were found to have enlarged Tonsils and Adenoids, of whom 917 Elementary and 158 Secondary were referred for treatment. At the Special Inspections held at the School Clinics 622 Elementary and 49 Secondary School children were found, of whom 517 and 44 respectively were referred for treatment. These figures totalled together are very similar to those for 1926, but more have been found at the Special Inspections and less at the Routine Inspections. During the year 843 Elementary and 47 Secondary School children received operative treatment for tonsils and adenoids under this Authority's scheme. The figures for 1926 were 761 and 41, which records an increase during 1927 of 82 Elementary and 6 Secondary School children. In addition to these, 34 Elementary and 6 Secondary School children received operative treatment by private practitioner or hospital.
- (d) Tuberculosis.—22 children were found at the Routine Inspections in the Elementary Schools and 10 in the Secondary Schools to be suffering, or suspected to be suffering, from Pulmonary Tuberculosis, while 91 Elementary and 5 Secondary School children were found at the Special Inspections at the School Clinics.

The above-mentioned figures record increases of 1 Elementary and 8 Secondary found at the Routine Inspections, decrease of 6 Elementary and an increase of 4 Secondary School children found at the Special Inspections at the School Clinics. Of the 128 children found, 109 were referred to the Anti-Tuberculosis Centre, where a Special Clinic is held each Friday at 2 p.m. The worst cases are generally admitted to Bierley Sanatorium, or Grassington Sanatorium School, of which particulars will be found in paragraph 17 (6), page 38.

There were 17 Elementary School and 4 Secondary School cases of non-pulmonary tuberculosis found at the Routine Inspections, 11 of which were referred for treatment. From the Special Inspections at the School Clinics, 56 Elementary and no Secondary School children were found; 41 of them were referred for treatment and 15 required to be kept under observation. These figures record a decrease of 10 Elementary and 5 Secondary found at the Routine Inspections, and 8 Elementary and 3 Secondary found at the Special Inspections, making a nett decrease of 26. In 1926 there was a decrease of 8 cases from the figures of 1925.

(e) Skin Disease.—At the Routine Medical Inspections 300 Elementary and 112 Secondary School children were found with skin disease; 274 Elementary and 79 Secondary were referred for treatment, whilst 26 Elementary and 33 Secondary required to be kept under observation. At the Special Inspections 2,606 Elementary and 73 Secondary children were found; 2,599 Elementary required treatment and 7 observation only, whilst all the Secondary required treatment. These figures are very similar to those found during 1926, excepting that rather less were found at the Routine Inspections and more at the Special Inspections.

Particulars as to the diseases from which these children suffered will be found in Table II, and those treated in Table IV, Group 1.

(f) EXTERNAL EYE DISEASE.—119 Elementary and 14 Secondary School children were found at the Routine Inspections to be suffering from this disease, whilst 644 Elementary and 37 Secondary School children were discovered at the Special Inspections at the Clinics.

It will also be found in paragraph 7b that 493 of these defects were discovered in Schools by the Nurses, most of which come under the Special Inspections at the School Clinics. A good number of these cases are also referred to the School Clinics by School Attendance Officers and Teachers.

(g) VISION.—It will be noticed from Table II that 680 Elementary and 390 Secondary School children were found at the Routine Inspections to require treatment for defective vision, not including 111 Elementary and 14 Secondary who required treatment for squint. At the Special Inspections, 2,132 Elementary and 214 Secondary were referred for treatment of vision.

The figures for the Routine Inspections show decreases of 80 Elementary and 79 Secondary; those for Special Inspections record decreases of 323 Elementary and 45 Secondary children.

The reason for the numbers under the heading of Special Inspections being so much larger than those found at the Routine Inspections is that the vision of all Elementary School Children who do not come within the Code Groups for Medical Inspection is tested annually at the Schools by the Nurses, and if they cannot read the Snellen's Test at 6/12 they are referred to the School Clinic for a further test by the Medical Officer.

- (h) Ear Disease and Hearing.—From the Routine Inspections 229 Elementary and 38 Secondary School children were found to be suffering from ear diseases or defective hearing, of whom 173 Elementary and 24 Secondary were referred for treatment, and 56 Elementary and 14 Secondary placed under observation. At the Special Inspections 568 Elementary and 12 Secondary School children were found, of whom 554 Elementary and 11 Secondary were referred for treatment and 14 Elementary and 1 Secondary placed under observation. All these figures are very similar to those for 1926. As in the case of external eye disease most of the Special cases found in School by the Nurses are referred to the School Clinics; this accounts for the small figures found at the Routine Inspections.
- (i) Dental Defects.—In addition to the annual inspection carried out by the School Dentists, the Doctors make an examination of each child's mouth at Routine Inspections. The numbers of children so found with dental defects during the past three years are shown in the appended tables:—

1927	Numbers Inspected	Less than four teeth decayed	More than four teeth decayed	Oral Sepsis
Boys Girls	8450 8064	1996 1925	430 480	11 11
Totals	16514	3921	910	22

1926	Numbers Inspected	Less than four teeth decayed	More than four teeth decayed	Oral Sepsis
Boys Girls	8671 8412	1851 2150	427 427	19 22
Totals	17083	4001	854	41

1925	Numbers Inspected	Less than four teeth decayed	More than four teeth decayed	Oral Sepsis
Boys Girls	8589 7924	2225 2576	197 201	17 21
Totals	16513	4801	398	38

(j) Crippling Defects.—At the Routine Inspections during the year 1927, 30 Elementary and 11 Secondary School children were found to require treatment; and 28 Elementary, along with 17 Secondary School children, were required to be kept under observation on account of Organic Heart Disease. There were also 17 Elementary School children referred for treatment, and 20 Elementary and 2 Secondary for observation from the Special Inspections. According to the record of children found suffering from Epilepsy, there appears to be some improvement on the figures of 1926; the figures for 1927 from Routine Inspections were 3 referred for treatment and 9 observation, from the Special Inspections 12 referred for treatment and 15 observation, all Elementary School children. There were no Secondary School children found suffering from this disease.

The number of cases found at the Routine and Special Inspections of children suffering from Crippling Defects caused by Rickets, Spinal Curvature and other forms which are not mentioned above, for the last three years are shown in the following table:—

		Elementar	y School	s		Secondary	Schools

6. INFECTIOUS DISEASES.—The exclusion of children suffering from or in contact with persons suffering from infectious disease for rescribed periods has been carefully carried out, and frequent additional risits to the Schools have been made by the Medical Staff on this account.

Small-Pox, Cholera, Diphtheria, Membranous Croup, Erysipelas, nfective Enteritis, Poliomyelitis, Acute Polio-Encephalitis, Encephalitis Lethargica, Malaria, Dysentery, Pneumonia, Whooping Cough, Measles, Lincken Pox, Tuberculosis, Ophthalmia Neonatorum, the disease known is Scarlatina or Scarlet Fever, and the Fevers known by any of the ollowing names: Typhus, Typhoid, Enteric, Relapsing, Continued Puerperal or Cerebro Spinal, come under the Notification of Infectious Diseases, and are all notified to the Medical Officer of Health by Assistant School Medical Officers and Private Practitioners. All cases notified to the Medical Officer of Health are visited by the Health Visitors, or Sanitary Inspectors, who give advice to parents and guardians of hildren repecting the care of the patients and the welfare of those in contact with the disease, and take steps, in cases necessary, for removal of the children to hospital. The Health Visitor also issues a notice excluding the patient and those in contact from attendance at School. During the year 2,583 exclusion notices were issued by the Health Visitors.

During the year 1927 there have been more infectious diseases in the Schools than there were in 1926, but it was only found necessary to close one School, and that was an Infants Department, for Small-Pox, during the week preceding the Christmas holidays. 46 Infants' and 2 Mixed Schools were granted certificates of exemption in accordance with the Board of Education Code of Regulations, for periods aggregating to 182 weeks for Infants' Departments and 2 weeks for Mixed Schools, compared with 92 weeks in 1926. The diseases for which these certificates were granted and the number of schools infected, often with more than one disease, were as follows:—

	Diseas	e.		No. of Infants' S	chools Infected.
	Disca			1927	1926
Measles		•••	 	45	9

Diphtheria			 	4	1
Small-Pox			 	1	

7. FOLLOWING UP.—When a child is found in School presenting a physical defect, the parents or guardians are informed by circular and recommended to consult a Medical Practitioner without delay, or take the child to the School Clinic on the following Wednesday of Saturday morning, when arrangements will be made for treatment. A the Medical Inspections of school children a list of defects is also recorded, from which necessary appointments for treatment are made. This list is afterwards kept for the purpose of following the cases up keeping cases under observation, and recording the result and date of treatment. The result of the treatment is afterwards entered on the Medical Schedule.

Systematic re-inspection and home visitation is undertaken by the Nurses to follow up all cases.

8. MEDICAL TREATMENT.—There are three School Clinics in Bradford, a Central Clinic, Great Horton Road, and Branch Clinics the Green Lane and Lapage Street Schools. Under the scheme of o-ordination of medical work, arrangements have been made for the reatment of certain defects at places mentioned below:—

(a) Minor Ailments ... School Clinics.

(b) Tonsils and Adenoids Special Hospital, Leeds Road.

(c) Tubercu'osis ... Anti-Tuberculosis Centre, Grassington Sanatorium and Bierley Hospital.

(d) Skin Disease ... School Clinics.

(e) External Eye Disease School Clinics, Ophthalmic Clinic, Edmund Street and Municipal General Hospital (St. Luke's).

(f) Vision ... School Clinics, Ophthalmic Clinic, Edmund Street and Municipal General Hospital (St. Luke's).

(g) Ear Disease and Hearing ... School Clinics and Special Hospital (Leeds Road).

(h) Dental Defects ... Dental Clinic, Central Clinic and 22, Edmund Street.

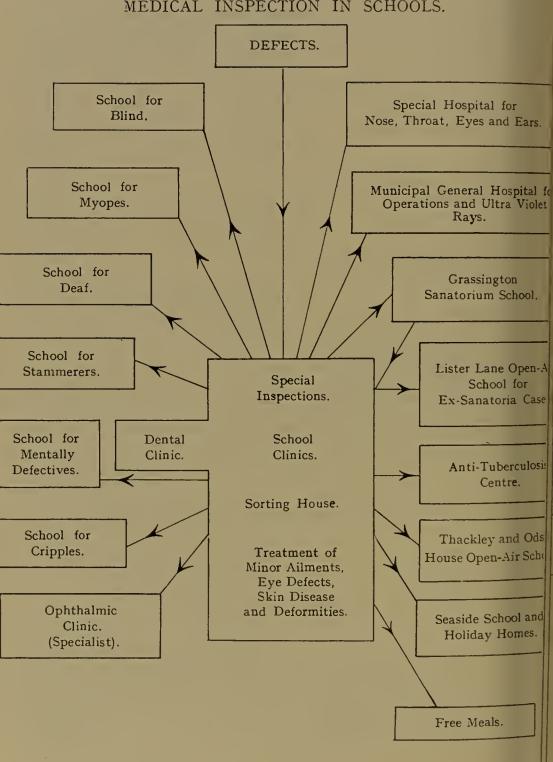

(i) Crippling Defects and
Orthopædics ... Central School Clinic, School for Physically Defectives, Lister Lane and
Municipal General Hospital (St. Luke's).

(j) Ultra Violet Rays for
Marasmus, Rickets,
T.B. Glands of Neck,
T.B. Bones & Joints,
Lupus and other skin

diseases ... Municipal General Hospital (St. Luke's)

DIAGRAM ILLUSTRATING HOW THE VARIOUS DEFECTS ARE REFERRED AND TREATED UNDER THIS AUTHORITY'S SCHEME.

The cases that have attended the School Clinics since 1908 are shown in the following table:—

Year	Number Treated	Examined only on first attendance	Total Attendances	Attendances per week
1908	841	590	4050	122

In addition to the attendances recorded in the preceding table, the following Medical Inspections were conducted at the School Clinics:

(1) Children examined as to their suitability for Elem. Secy.

admission to Secondary Schools 1056

(2) From School of Art (Routine Medical Inspection) — 97

The following table shows the examinations made in connection with Special Schools, transference to Convalescent Homes, employment of children and continued attendance at Secondary Schools. These have been analysed under the defects found or no defect found and are all included in the previous table.

TINEA (RINGWORM) OF THE HEAD.

X-RAY TREATMENT.

During the year 1927, 85 cases of ringworm of the head were treated against 100 in 1926, 90 in 1925, 106 in 1924 and 140 in 1923.

The average length of time from date of the X-Ray Treatment until re-admission to School was 22.78 days compared with 23.98 days in 1926, 21.63 days in 1925 and 22.1 days in 1924. All the children are re-inspected about six months after treatment, and the re-growth of the hair has been most satisfactory.

The number of cases found with Ringworm of the Head and referred for treatment during the year was 165 compared with 186 in 1926, 198 in 1925, 278 in 1924 and 380 in 1923.

The number of cases treated under this Authority's Scheme during the year was 164 compared with 173 in 1926, 184 in 1925, 269 in 1924 and 372 in 1923. There are still some parents who refuse to have X-Ray Treatment, preferring the old way of treatment with ointments, etc.

The above-mentioned figures prove that Ringworm of the Head is slowly diminishing.

In the year 1910, 623 children made 3823 attendances for treatment at the School Clinic in that year for Ringworm of the Head.

PROVISION OF SPECTACLES.

It will be noticed from Table IV Group 2 that most of the spectacles were provided by this Authority. A contract is made by the Education Committee with a local Optician for the supply of spectacles at a reduced rate.

It will also be seen from Table IV Group 2 that during the year 1876 Elementary and 379 Secondary School children were supplied with spectacles by this Authority, against 1,952 Elementary and 408 Secondary in 1926.

Of the 2,255 supplied, in 1935 cases the parents paid the full cost to the Authority, 121 pairs were for children at the Myope and Blind Schools where Spectacles are provided, free of charge, as part of the treatment, and in 182 cases the cost of the spectacles was remitted by the Committee after full enquiry into the family circumstances had been made, while in 17 Cases the Committee remitted part of the cost.

In addition to these 202 pairs of spectacles were repaired or in some cases second pairs of spectacles were provided for the Myope School children, and 587 repairs or second pairs for children attending ordinary Elementary and Secondary Schools: the latter number of repairs were paid for by the parents excepting 57 cases in which the cost was remitted by the Committee. These make a total of 3044, pairs of specacles supplied during the year against 3080 supplied in the year 1926.

ULTRA VIOLET RAYS TREATMENT.

Children attend at St. Luke's Municipal Hospital for treatment ith ultra violet rays. The number of individual children treated, long with the defect or disease and the total attendances for treatment, re shown in the undermentioned table:—

School children treated January 1st to December 31st, 1927.

The figures for the previous year, April 9th to December 31st, Fere 87 children, 2445 attendances.

DENTAL REPORT.

By H. V. Morrell, L.D.S., R.F.P.S. (Glasgow).

I have to report that the School Dental Surgeons have inspected 27,219 elementary and 1,929 secondary school children during the year, and of these 24,782 were found to require treatment.

There has been an advance in the work in the Secondary Schools and the organisation has steadily improved.

During the year we have treated 79 orthodontic or regulation cases for children suffering from irregularities of the teeth, the most common being misplaced upper canines, and the treatment in every case has been entirely satisfactory, and there has been a marked improvement in the appearance of the children.

Altogether 12,953 children have been treated at the clinic and we have found as a result of following up in schools that 2,634 children have been treated by their private dentists. The alacrity with which the children have responded to suggestions has been encouraging. Ordinary appointments have been well kept, and appointments for nitrous oxide exceedingly well, as practically 96 per cent. of these latter appointments have been kept.

The number of special cases treated during the year has been well maintained and it is especially gratifying to know that many of these patients are very young children and in many cases have only just commenced school, and the parents believe in bringing them along as part of the ordinary school routine.

We are indebted to the teachers for their great assistance in following up the cases in the schools, and also for the satisfactory manner in which the appointments have attended throughout the year.

SPECIAL OPHTHALMIC CASES.

By W. OLIVER LODGE, M.D., F.R.C.S.

Cases are referred by the School Medical Officers to the Ophthalmic Surgeon at the Ophthalmic Clinic, Edmund Street, each Thursday at 2 p.m. Cases requiring operations or hospital treatment are dealt with at St. Luke's Hospital. The consulting Surgeon also visits, as required, the Myope School.

the Myope School.	Child- ren	Attend- ances

6. In-patients (St. Luke's Hospital) admitted om Special Ophthalmic Clinic Operations for :— (a) Squint (b) Cataract removed (c) Entropion	ب ب	

At an early stage in the life of the human embryo, a globular atgrowth from the brain becomes invaginated, just as an india rubber all might be indented by a schoolboy's fist, and through the oblique left which results, various essential components find their way. From tese foundations the eyeball develops.

Errors of refraction are deviations from the normal architecture. astigmatism, the front of the eye is flattened, commonly about an is more or less corresponding with the above cleft, and symmetrically the two eyes. Some eyes are too short; that is, hypermetropic; hers are too long; that is, myopic, or are destined to become myopic aring childhood or adolescence. If the strength of certain tissues is adequate to withstand normal stress, the myopia will be progressive.

The design of every eye has evolved with genus, species, race and mily. One or two examples taken at random will illustrate this stateent. Fishes are normally myopic, and accommodate for distance. If the trout, the pupil is circular; in the grayling, it is pear-shaped. If man, various racial and familial peculiarities are discernible. To cite the extreme case, the eyes of albinos almost always show high-grade fractive errors, but every day our records enable us to trace less stinctive characteristics through successive generations.

Though we are powerless to abolish errors of refraction we are ple to avert or mitigate most of their consequences. Visual defects common enough to justify looking for them before the onset of mptoms. For practical purposes preventive treatment may be fined as treatment instituted during the first seven years of life. ater, when amblyopia, squint, nystagmus or myopic tendencies have en established, treatment becomes curative. It is scarcely necessary add that prevention is better than cure.

ORTHOPÆDIC CASES.

By Mr. F. W. GOYDER, M.B., F.R.C.S., Consulting Orthopædic Surgeon.

The Orthopædic Surgeon has made regular visits to the School for Physically Defective Children at Lister Lane, 314 examinations have been made, of which seven were cases recommended by the School Medical Officers. It is gratifying also to note that old pupils who have been under treatment occasionally attend for re-examination. A number of cases, too, who have been cured at the Clinic at St. Luke's Hospital are admitted here, so that adequate supervision and after treatment can be given to them without neglect of their education. The splints and appliances which many of them have to wear, for a time, are such that these children could not be treated at an ordinary school and but for the existence of this school would have no chance of education or vocational training.

St. Luke's Hospital.—Out-Patient Clinic.—This is held on Saturday mornings at 10 a.m.; 262 examinations have been made, the details of which are given below:—

Referred by School Medical Officers	 50
Referred by Child Clinic and other sources	 S_{\parallel}
Referred from wards at St. Luke's Hospital (a few of these are adults)	43
·	
Old in-patients of Clinic	 161
	305

This total is over 100 more than last year's and the large numbers though greatly increasing the labours of the Orthopædic Surgeon have added greatly to the interest in the work. The increased co operation of the School Medical Staff is very welcome. An arrangemen has been arrived at whereby all surgical cases, not necessarily strictly orthopædic, of school age may be referred for opinion or treatment an arrangement which should still further co-ordinate the work of th School Medical Officers and the Orthopædic Surgeon.

As in 1926 infectious disease has limited the in-patient work only 98 cases having been admitted to the Orthopædic Ward, but excluding those over school age, some of whose treatment began during the school period (12 operations) and those children outside the Bradfor Area (4 operations) 97 operations have been performed on 63 children This may seem an excessive number per child, but the following table which shows the type of case and the large percentage of manipulative and plaster after operations not requiring anæsthetics, makes the reason clear.

				Number of cases	Operations under Anæsthe- tics	Manipu- lations and/or Plaster	Total

				VT.)	1	

With regard to the detailed list given above, the following points ay be of interest.

Congenital dislocation of the hip. These cases can be cured more sily and with much greater certainty if they are seen before school e. In all the cases mentioned here, reduction is now permanent, it the functional result in four would have been far better had the ildren not been so old.

Congenital talipes. These cases are mainly from the wards of the pospital. Two are relapsed cases treated elsewhere. Early treatment this class is even more important than in the former.

Obstetrical paralysis. It is not sufficiently well known that the fer disabilities resulting from the contracture of unparalysed muscles, n be greatly ameliorated by operation during school age.

Infantile paralysis. The cases likely to benefit by operative treatnt are few in proportion to the total of such cases. They require
long course of preparatory treatment, a careful choice of the time of
eration and prolonged after treatment. All these they get at Lister
ne School. The results of paralytic valgus have hitherto been untisfactory, but recent research has put operation on a sounder basis,
id two satisfactory results are included in this report.

Deformities due to Rickets. Two separate classes have to be dealt with at this Clinic:—

- (1).—Those of pre-school age where the disease is still active, or has recently been so. These are treated as in-patients, by proper food, massage, sunlight or by light splints and where the tibial deformities are extreme by manual fracture.
- (2).—Those of school age where the bones are hard and in which the deformities can be corrected only by osteotomy. In this latter class it must be remembered that actino-therapy, though it improves the general condition of the child, has no effect on the deformity.

9.—OPEN-AIR EDUCATION.—

- (a) Playground Classes.—The only classes which are regularly held in playgrounds are those for physical training, but in favourable weather other classes are frequently held in the playgrounds.
- (b) School Journeys.—During the Spring and Summer months children are taken for journeys to the outskirts of the city and given instruction in nature study, botany, etc. Classes are also taken into the Parks and Recreation Grounds for one lesson per week.
 - (c) School Camps.—Camp Schools were not re-opened in 1927.
- (d) Open-air Classrooms in Public Elementary Schools.—Excepting Special and Nursery Schools there are only two Schools in Bradford with Open-air Classrooms; both Infants' Departments.
- (e) Day Open-air Schools.—There are now three permanent Open-air Schools in Bradford. On November 11th, 1927, the temporary Open-air School at Daisy Hill was closed, and the new school at Odsal House was opened on November 14th.

The children are selected for Open-air Treatment because of their debilitated condition, by either (a) School Medical Officers or School Nurses when inspecting Schools; or (b) School Medical Officers at the School Clinics; or (c) Doctors, Head Teachers, and School Attendance Officers, the final decision in all cases resting with Dr. Williams.

Special attention in this matter is given to all children who are attending School irregularly on account of ill-health, or are on the feeding list.

Very urgent cases are admitted a few days after medical examination, others are placed on a waiting list and are admitted in turn as early as circumstances permit. There are three School Terms in the year ending at Easter, Midsummer Holidays, and Christmas. All children undergo periodical medical examination whilst in attendance at the Open-air School and only at the end of the School Terms are suitable children selected for discharge.

The teachers and children assemble each morning in the centre the City. Those who live some distance are supplied with checks r travelling in the tram car. The cars which convey the parties to hoo's leave the City at 8-30 a.m. Two of the schools, Odsal House and Lister I ane, are on the car routes, and the Thackley School is only few minutes' walk from the car, this enables the children to arrive the ere about 9 a.m.

Medical Supervision.—The children are under the direct supervision the School Doctor, who visits the school at least once a week. During s visit he makes an inspection of all the scholars. Each child is weighed ace a week. The School Nurse also visits the school one or two half-days are week.

All the schools are open all the year round, excepting a short period Easter and Christmas.

(1) Thackley Open Air School.—Full particulars of this school, hich has been in existence since 1908, have been given in detail in revious reports.

The children who attend this school are of all ages from 6 to 14, and are those which live on the north, north-east and north-west sides the City. The dietary is as follows:—

THACKLEY OPEN AIR SCHOOL—DIETARY.

REAKFAST:—Porridge with milk and treacle; cocoa with bread and margarine.

INNER:—Monday—Boiled or roast meat and vegetables; milk pudding. Tuesday—Vegetable or pulse soup; suet pudding either boiled or steamed. Wednesday—Stewed meat and vegetables, or stewed meat and suet pastry; milk pudding. Thursday—Meat and potato pie; thick rice pudding and stewed fruit. Friday—Fish, "steamed" potatoes and sauce; bread and butter pudding, containing dried fruits, or jam roly-poly, or steamed suet puddings.

The Dinner Menu is varied according to seasonable products of e School Garden. Rhubarb (with custard) and rhubarb pies are equently served as second course, whilst plentiful use is also made of oad beans, peas, lettuce, celery, etc.

EA:—Hot milk is served before leaving school in the afternoon.

This school continues to be conducted along the lines indicated previous reports. A record is kept of all clinical facts relating to each ild, and the height, weight, lung capacity, hæmoglobin content, etc., e also noted.

The following table gives the average increases in height, weight, c., of the children discharged during the last eight years:—

Year	Number of children discharged	Increase in weight (kilos.)	Increase in height (cents)	Increase in hæmoglobin	Increase in chest measurement	Average stay in months
	177	$\phantom{00000000000000000000000000000000000$	5.29	11.33%	0.94	10.5
1921	258	$2 \cdot 20$	3.27	9.34%	0.61	7.3
1922	297	$2 \cdot 28$	4.78	12.88%	0.37	8.4
1923	257	$2 \cdot 43$	4.06	8.04%	1.11	8.7
1924	329	2.48	3.43	14.15%	0.59	7.3
1925	410	$2 \cdot 64$	3.46	12.99%	1.02	7.5
1926	415	3.28	3.46	12.43%	1.50	8.4
1927	381	2.81	4.55	10.82%	1.00	9.2

The numbers of children in attendance at the Thackley Open-air School during the year 1927 are as follows:—

		Boys	Girls
Number on register 1st January, 1927		156	172
Number admitted during 1927		200	206
Number discharged during 1927		195	224
Number on register 31st December, 1927		161	154
Average number present during the year	• • •	124.9	123.8

(2) Odsal House Open Air School.—On 14th November, 1927, the children were transferred from the temporary Open Air School at Daisy Hill to permanent premises at Odsal House, previously occupied by the Blind children. The School is situated on a site with a southerly aspect, surrounded by trees, with large gardens and two playing fields. The site covers 7,693 acres.

The main building consists of large assembly hall, two dining rooms, six classrooms, teachers' room, Medical Officer's Inspection room, baths, dressing room and kitchen. In front of the six classrooms (which are only used in severe weather) has been built a large verandah extending along the southern side, which can be divided, by sliding shutters, into six open-air classrooms, or, when they are required as larger rooms for exercises and drill, they can be made into three very large rooms.

At the rear of the building are two rest sheds, one for girls and one for boys. The school is conducted along similar lines to the Thackley School.

All meals are cooked on the premises, and the dietary is the same as the one at Thackley. The older boys and girls are taught gardening and domestic handwork, such as repairing of tools, apparatus for all practical arithmetic and geography, elementary upholstery, repairing of desks and chairs, decorative work, etc.

The accommodation is 200. Particulars as to the number of childre in attendance at Daisy Hill and Odsal during the year are as follows:—

		Boys	Girls
Number on register 1st January, 1927		 63	39
Number admitted during the year	•••	 114	108
Number discharged during the year	• • •	 122	95
Number on register 31st December, 1927		 55	49
Average number present during the year	• • •	 53	46.8

(3) Lister Lane Open-Air School:—This School is adjacent to the School for Physically Defectives, and is set apart for the accomnodation of children discharged from Sanatoria and free from infectious pulmonary disease. They are kept apart from the children in the main block, and on evidence of any infectivity are discharged for re-admission of a Sanatorium. Most of the quiescent cases of tuberculosis of bones and joints still continue to be admitted to the Physically Defectives' School, so that they may receive the after-treatment they require.

There were 91 children on the School Register at the end of 1927, the are classified by the Medical Officer of the School as follows:—

54.	В	oys	G.		
Defect	Aged 5 to 10	Aged II to 14	Aged 5 to 10	Aged II to 14	Total
retubercular	10	11	5	7	33

10. CO-OPERATION OF PARENTS.—Parents are invited to attend the Routine Medical Inspection of their children in both Secondary and Elementary Schools and all medical examinations at the various Clinics.

The presence of the parents affords an opportunity to the Medical Officers for giving advice and explanations about the children's health, also in cases where operations for Tonsils and Adenoids or treatment at any of the Special Departments are recommended by the Medical Officer, the consent of the parent is obtained at the time of the inspection, thus causing no delay in these cases being referred and treated.

The percentage of parents present at the Routine Inspections in 1927 was 2·27 higher than in 1926 and 6·32 higher than in 1925. From Table VIII at the end of the report it will be found that 77·48 per cent. of parents were present at the medical inspection of Entrants, whereas only 40·67 were present at the medical inspection of Leavers, 19·63 at the Girls' Secondary Schools, and 1·01 at the Boys' Secondary Schools.

11. CO-OPERATION OF TEACHERS.—The School Medical Service is much indebted to the Teachers for the help given at the Routine Inspections, for cases referred to the School Clinics, reporting outbreaks of infectious disease amongst the scholars and sending reports on Special cases to the School Medical Officer. Their support goes far to lighten the work of the Medical Officer. In return, the School Medical Department does everything possible to arrange the School Medical Inspections at such times and periods as will least interfere with the educational work of the School.

The influence of the Head Teachers with the parents helps the attendance of children at the School Clinics for both medical and dental purposes and the teachers' special knowledge of the children and their environment is very helpful to the Nurses in "following up."

12. CO-OPERATION OF SCHOOL ATTENDANCE OFFICERS.—The information gained by the School Attendance Officers in visiting the homes of the children is given to the School Medical Department in all cases where difficulty is obtained in securing the attendance of children at the School Clinics, and is much appreciated; many cases having occurred during the year where three appointments have been made for a child to attend the School Clinic without any result, but in each case the Attendance Officer has finally secured the child's attendance. The medical certificates given by private practitioners, collected by the School Attendance Officers, are all kept at the Central School Clinic after particulars have been entered on the Medical Record Cards of the children concerned.

The School Attendance Officers also assist in the collection of accounts outstanding for medical treatment and spectacles supplied to children in cases where the parents have failed to pay at the School Clinics.

13. CO-OPERATION OF VOLUNTARY BODIES.—The help iven by the Bradford Cinderella Club in providing children referred o them by the Medical Staff with the necessary clothing and boots, iso by sending children to the Ambler Home, Morecambe, has been such appreciated.

The Guild of Help visitors have also assisted the School Medical rervice by referring cases to the School Clinics, giving information brained during their visits to homes and also, in a few cases where arents were working, they have brought children to the School Clinics.

The Charity Organisation Society has also assisted the School ledical Service in helping cases referred to them by the School Medical

Officers.

During the year many cases of neglected children have been brought of the notice of the National Society for the Prevention of Cruelty to hildren's Inspectors, with beneficial results to the children concerned. The Inspectors have also visited cases where the parents had refused to brain spectacles prescribed by the School Medical Officers.

14. BLIND, DEAF, DEFECTIVE and EPILEPTIC CHILDREN.

(a) The methods adopted for ascertaining and dealing with children who are defective within the meaning of Part V of the Education Act, 921, are as follows:—

The majority of cases are found during the Routine Inspections 1 the Schools and the Special Inspections at the School Clinics. Others re referred by Head Teachers and School Attendance Officers. Whenver a case is found, or referred, a special appointment is made for the hild to be medically examined at the Central School Clinic by the Chief assistant School Medical Officer, who makes all recommendations to the total Education Authority for admittance to the various Special Schools 1 the City.

- (b) All Mentally Defective Children of School age, not in attendance t Special Schools, are placed under the supervision of a Voluntary are Committee. The children also attend the School Clinic, at periods amed by the Certifying Officer, for re-examination, or are visited at heir homes or Elementary Schools by the Medical Officer.
- (c) The arrangements made for the after care are carried out by the Local Mental Deficiency Committee. All children who pass through the Special Schools are notified to this Committee under Section 2 (2) (a) or 2 (2) (b) of the Mental Deficiency Act, 1913. This Committee as set up a Voluntary Committee which undertakes the visitation of uch persons at regular intervals, and the reports of these visitors are resented to the Committee not less than twice in each year.

All blind children reaching 16 years of age are notified to the Blind Persons Act Committee, and are then referred to the Royal Institution or the Blind for Training Courses. All children leaving the Special chools are visited and kept under the supervision of the Special Schools

ub-Committee.

Each Special School has a House Committee, which is composed of members of the Education Committee, along with voluntary workers, who visit the homes of the children and submit their reports to meetings which are held at regular periods.

General Review of the Special Schools:-

On account of the decrease of blind children in the City the Odsal House Blind School was closed on 8th July, 1927, and the children transferred to Blind Schools under other Authorities.

It will be noticed from Table III at the end of the report that only six boys and seven girls were attending certified schools for the Blind.

(1) THE MYOPE SCHOOL.

The school at Daisy Hill is self contained, of the Open Air type, built for this class of children in one of the healthiest parts of the city. Particulars respecting the aspect, surroundings, buildings, etc., have been previously reported upon, but during the year under review the School has been enlarged by the erection of two classrooms at the east end of the School, the extension of the balcony, a reconstructed Teachers' Room and two W.C.'s. The accommodation has been increased from 110 to about 160.

When this School was opened in July, 1923, there were only 70 children on the register; in December, 1925, the number had increased to 58 boys and 82 girls; and in December, 1927, to 68 boys and 94 girls; there were also 14 boys and 19 girls attending public Elementary Schools and 12 boys and 10 girls at no School or Institution, all of whom had been recommended or certified by the Chief Assistant School Medical Officer for admission to the Myope School.

An analysis of these 55 children, from the records at the School Clinic, gives the following particulars:—In 21 cases the parents had consented or were considering the question of allowing their children to go to the Myope School; in eight cases the parents preferred their children to attend an Open Air School and these children were admitted to Open Air Schools on the re-opening of the Schools after the Christmas Holidays; in 17 cases the parents refused to allow their children to attend the Myope School and the remaining nine cases had been recommended for the Myope School but for various reasons admission had been postponed.

Particulars as to the number of children in attendance at the School during the year are as follows:—

(2) THE DEAF SCHOOL.

This School, which is situated on the east side of the Odsal House Open-Air School, is a detached stone building, together with a large Army Hut, which have been adapted for workshop and class-rooms to meet the requirements of the deaf children. There is accommodation or forty day pupils.

The greatest amount of time is given to teaching the deaf to speak, i.e., the actual development of the power of articulation and the building up of a vocabulary by which a child can express his growing ideas.

Carpentry and gardening serve for general training, while affording o some boys an opportunity for choosing a means of livelihood. For he girls, needlework, both hand and machine work, together with cookery and housecraft, serve for manual occupations.

(3) LISTER LANE SCHOOL FOR PHYSICALLY DEFECTIVES.

This is a special school for children who are so incapacitated, principally on account of deformity or cardiac disease, that they are unable to benefit from education in an ordinary Elementary School. They are admitted on attaining school age, or later, and stay till 16 years old. In many cases of deformity irreparable damage has been done by the time the child comes to School, 2 to 5 years having elapsed since the period when restoration of function of the affected parts might have been possible. Motor ambulances are provided for the conveyance of children unable to travel by the ordinary means of transport. Special chairs and couches are available in the class-rooms.

The School is designed on open-air lines with ample window space and playing grounds. The main block is orientated to get the maximum amount of sun. The children stay all day at School, their dinners being sent from the Green Lane Cooking Depot. Additional milk puddings are prepared in the School Kitchen, where also the girls get cookery lessons. The children rest for an hour on canvas stretchers after their dinners.

Education is adapted to the needs and capacity of the individual. An increasing amount of technical training is being introduced. The problem is how to enable these children to command an adequate wage in the labour market. In mental capacity the children vary from those considerably retarded mentally to acutely intelligent Secondary School children. The range of physical capacity is almost as wide.

The Medical Staff is common to the Physically Defectives and the Open-air Schools at Lister Lane. It consists of a Nurse and four Masseuses, who are employed whole-time, the Medical Officer, who visits three half-days a week, and a Consulting Orthopædic Surgeon, who visits one half-day a week. Massage, remedial exercises, baths and electricity form part of the routine treatment. Cellulose splints and jackets and simple metal splints are made and fitted at the School. The Orthopædic Surgeon operates on selected cases at St. Luke's Hospital.

There were 189 children on the School Roll at the end of the year, classified as follows:—

	В	oys	G

(4) Classes for Stammerers.

There are two classes for Stammerers at the Wibsey Council Scho The method followed by the teachers in charge has been based on suggestions made by Mr. Arthur Burrell, M.A., late Principal of Borou Road College. The scholars remain to dinner and rest before beginn the afternoon's work. This daily rest forms no small part of the tree ment of the stammerers, whose general physical condition is careful watched. The treatment includes special breathing and rhythm exercises, and in addition the scholars take such ordinary class subjections.

; may be followed without detriment to the general development of peech control.

36 children attended these classes during the year 1927, of whom were discharged cured, leaving 31 in attendance at the end of the ear; 20 were reported to be greatly improved, 9 slightly improved, and 2 no change. The 5 cured include 2 children discharged by the edical Officer for the classes as "fit to return to ordinary school" ho still had some tendency to stammer.

1) THE MENTALLY DEFECTIVE SCHOOL.

The Margaret McMillan Special School was opened in the Summer 1915. The girls occupy a country house, which stands in its own ound of four and a half acres. The boys' premises up to the end of 027 have consisted of wooden buildings constructed by the boys and achers in a field at the rear of the girls' school. These are now being ibstituted by a permanent building, and the boys have been transred to temporary premises at Daisy Hill, previously used as an Openr School.

The numbers of children attending this School are shown in the llowing table:—

(6) GRASSINGTON SANATORIUM SCHOOL.

On January 1st, 1927, 22 boys and 8 girls were in residence at the Grassington Sanatorium School for suspected or definite Tuberculosis; 45 boys and 33 girls were admitted during the year, 43 boys and 26 girls discharged, leaving on register 31st December, 1927, 24 boys and 15 girls.

The 39 children on register 31st December, 1927, were classified by the Medical Superintendent of the Institution, Dr. Cummings, as follows:—

, ,,,	,	Bovs	Civic
	Infectious Pulmonary and Glandular Tuberculosis Non-infectious but active pulmonary and glandu-	s —	2
	lar tuberculosis	. 11	9
3.	Active non-pulmonary tuberculosis	. 3	1
4.	Pre or latent tuberculosis	. 10	3
			_
		24	15

The 69 children discharged were dealt with as follows:—

Admitted to	Boys	Girls	Total
Lister Lane Open-Air School	14	4	18

Mr. F. W. Goyder, M.B., F.R.C.S., Consulting Orthopædic Surgeon attends this School monthly to supervise the treatment of Surgical Tuberculosis and arrange for any cases requiring Surgical Treatment to be transferred to the Orthopædic Clinic at St. Luke's Hospital.

The following particulars respecting the treatment of school children at the Anti-tuberculosis Centre and Bierley Sanatorium have been given by Dr. Vallow, the Tuberculosis Officer:—

	Boys	Giris
1. Children treated at the Anti-tuberculosis Centre:— Number under treatment on the 1st January, 1927 Number of new cases during the year	21	14 82

Number discharged during the year (including cases	Boys	Girls
sent to Sanatoria)	64	42
Number remaining under treatment on 31st December,		
1927 (including cases who were not sent to		
Grassington until January 1st, 1928)	22	16

The new cases include 41 boys and 38 girls, who were referred to the Anti-tuberculosis Officer for examination and opinion only; these are not included amongst those discharged, as they did not attend the Centre for treatment.

2. Children under treatment at the Bierley Sanatorium on the 31st December, 1927:—

15. NURSERY SCHOOLS.—There are four Nursery Schools in Bradford, St. Ann's School was opened in the Spring of 1920, Princeville School in November, 1920, Lilycroft School in May, 1921 and Wapping Road School was opened in October, 1925.

Full particulars respecting sites, buildings, equipment, gardens, dietary provided and general principles which guide the life of the Nursery School, etc., etc., have been given in previous reports.

The Medical Staff acts in close association with the Education Staff in connection with the general arrangements, equipment, and dietary provided. The Assistant School Medical Officer and the Nurse isit the Schools at regular periods.

It will be noticed from paragraph 24, Statistical Tables, that 244 children were on the registers of these Schools on the 30th June, 1927. It will also be noticed from Table I that 332 children were medically examined during the year, the increase over the number on register being accounted for by children who have left the School or been transferred to Infants' Departments during the year.

Of the 332 children examined, 363 defects were found, 115 observation cases and 248 referred for treatment. The following table shows the defects found:—

Number of Defects found at the Periodical Examinations of 332 Nursery School Children.

In addition to the benefits obtained by the young children, the croft Nursery School is affording valuable opportunities to the lescent girls from the Lilycroft Mixed School in learning the right hods of management of young children.

The co-operation of parents was secured by consulting the parents he girls concerned. They were invited to visit the Nursery School neet the Heads of Departments. Discussion and suggestions were ted and the Parents expressed their unanimous co-operation support.

Accordingly, girls of the leaving class (aged 13 to 14 years) attend Nursery School in rotation for one half-day per week during their school year. They alternate morning one week and afternoon next. Thus they see the greater part of a day's activities in the of a young child from 8-30 a.m. to 5 p.m.

The girls are treated as students. They invariably rise to the ed dignity of a uniform, a note-book and a special little corner as sery "Big Sister" to the Babies. Several have their own little ers and brothers in the Nursery. The girls take part in every activity he Nursery except Medical Treatments and actual teaching, which "observe." They obviously enjoy their visits.

The Scheme, which has been approved by H.M.I. and the Board Education, has been rendered possible by the hearty co-operation he Head Master of the "Mixed" School, and is effectively corred with the Domestic Science scheme in the school curriculum. also connected up with the Needlework Scheme, in that the girls oly some of the domestic needs of the Nursery School, by making mending towels, face-cloths, table-covers, overalls, brush-bags, ers, etc.

16. SECONDARY SCHOOLS.—During the year the woman Medical cer has been employed about six half-days per week on work in nection with the Secondary Girls' Schools. In the Boys' Secondary bols a similar amount of time has been spent, the Medical Officer ach of the four districts taking the Secondary Boys' School in his icular district. Medical Inspections have been carried out in all Secondary Schools under this Authority, also in the Bradford Boys' mmar School, the Girls' Grammar School, St. Bede's Grammar ol and St. Joseph's College for Girls. In all the Schools except Boys' Grammar School the classes of children examined were all rants and children 12 years of age together with children over 12 s.

It will be seen from Table I that 3,999 children were examined ng the year, compared with 4,261 in 1926, and 4,225 in 1925.

The summaries of all defects found with the recommendations of Medical Officers are given in the Tables under the heading of indary Schools.

- 17. CONTINUATION SCHOOLS.—No provision is made for the Medical Inspection of pupils in Continuation Schools by this Authority.
- 18. EMPLOYMENT OF CHILDREN AND YOUNG PERSONS—Education Act, 1921, Part VIII, Section 90 to 108.

There has been no change in the administration of the Bye-laws for the control of young persons trading in the streets, and for the regulation of children in general employment.

The provisions of the Bye-laws controlling these employments have been so widely and thoroughly circulated throughout the City that flagrant offences rarely occur.

Approximately 400 children were known to be employed out of school hours during the year, the chief occupations being errand boys or girls in connection with shops of Newsagents, Milk Dealers, Grocers, Butchers, Confectioners, and Greengrocers. The number of offences discovered during this period was 218, these figures relating to 133 children. Warning notices were served in respect of 211 of the complaints, and in 7 cases proceedings before the magistrates were instituted, and fines totalling £8-10-0 and 9/6 costs were imposed.

Twenty-two children who were under 12 years of age were found to be employed contrary to the provisions of the Education Act, and in 20 of these cases warnings were sent to the employers concerned In the other 2 cases the employers were prosecuted and fines totalling £1-10-0 and 4/- costs were imposed.

CHILDREN EMPLOYED IN PUBLIC ENTERTAINMENTS.

During the year 44 applications were made and granted to enable children to take part in public entertainments. The whole of thes children were examined by the School Medical Officer in order to ascertain their fitness for this work, and in each case they were certified as being fit.

Two children have visited Bradford under licences issued by other Education Authorities and have taken part in public entertain ments at the various places of amusement in the City.

One child was found to be taking part in a dancing competition one of the places of amusement after 7 o'clock in the evening withou having a license so to do. The employer was warned and the provision of the Act and the Special Regulations and Orders explained to hir

In addition 34 children have taken part in various entertainmen in the City, 17 of these being engaged in the Prince's Theatre Christmann Pantomime.

The Statutory Rules and Orders are strictly enforced. Apartments respect of children on tour are very carefully inspected; the children re chaperoned to and from the theatre, and attend school regularly. he dressing rooms at the theatres and music halls were regularly aspected, and the children checked as to the time they left the theatre, to.

TREET TRADING.

No girl under the age of 16 years is permitted to engage or to take art in street trading, and youths desiring to follow this occupation nust be 15 years of age and certified as fit for this occupation by the chool Medical Officer.

Three licences were issued during the year, and during this period I boys were found illegally trading in the streets without licences. he employers and parents were warned that a repetition of the offence rould involve them in legal proceedings.

Having regard to the size of the City, there is no serious ground for omplaint, either with regard to the employers of children, or respecting he young persons trading in the streets.

In the work of supervision of Street Traders the Police have readily nd effectively co-operated with the officials of the Education Departnent.

9. Special Inquiries.—Stammerers.

In April, 1927, the Board of Education asked for information on he value of the various methods of training used in the treatment of hildren suffering from stammering and instituted an enquiry towards hat end. Thirty-one children were re-examined who had been in attendance at the classes and who had left the class for a period of one ear or upwards. The results were judged after a personal interview with the child, together with any information bearing on the degree, f any of stammering still obtaining as gathered from information obtained from the Teacher of the School the child was attending, or from the parent or other persons in contact with the child. The cases were unselected. The following is the result of the inquiry:—

Class of Stammering on admission	Duration of Treatment	Length of time since leaving		Result
		Stammerers	On leaving School	Present condition
Considerable Severe	$\frac{3}{1}$ years	5 years 3 years	Cured	Occasional stammer when excited Occasional stammer when excited.

20. MISCELLANEOUS.—During the Summer of 1927, 1,056 nior Scholarship candidates were medically examined and of that mber 177 boys and 188 girls, or 34.56 per cent. were found to be fering from some abnormality, full particulars of which will be found the undermentioned table, which should prove the necessity of ldren being medically examined before they are allowed to enter condary Schools.

In practically all cases where the Medical Officer had recommended eatment, the treatment was carried out at the School Clinic or Special partments under this Authority. Of the numbers found abnormal, boys and 19 girls were certified by the Assistant School Medical ficers after consultation with the Chief Assistant School Medical ficer, to be physically unfit for Secondary School education.
